KRONOLOGI DAN PROSES KORESPONDENSI ARTIKEL

1. Pada awalnya, artikel berjudul: **Reinforcement Religious Moderation Education for Youth in Strengthening Tolerance: Is Intellectual Humility Needed?**, disubmit pada tanggal 18 September 2022.
2. Pada tanggal 26 September 2022 ada konfirmasi dari editor bahwa naskah **REJECTED/DITOLAK**, dan diberikan kesempatan untuk memperbaiki

The screenshot shows a Gmail interface with an email from 'aosis@hts.org.za' to 'me'. The subject is 'HTS Submission 8136 - Rejected without external review, resubmission elsewhere'. The email body contains the following text:

Ref. No: 8136
Manuscript title: Reinforcement Religious Moderation Education for Youth in Strengthening Tolerance: Is Intellectual Humility Needed?
Journal: HTS Theologies Studies / Theological Studies

Dear Prof. Pajaranto

Re: Rejection without external review

Thank you for submitting your manuscript to the journal. All new manuscripts are given a preliminary review by the editor(s) to assess whether the subject matter and general content are appropriate for this journal.

I'm afraid that, based on our desk review comments and my own reading of your manuscript, we are not able to accept it for external review. Unfortunately, it seems very unlikely that any revisions could be made that would render the manuscript acceptable for external review in this journal.

You are hereby invited to submit this submission declined by HTS to Buaro Buro, Lecturer of Modern Islamic Theology, Faculty of Ushuluddin, UIN Sunan Gunung Djati Bandung, West Java, Indonesia (buaro@uicjod.ac.id) for consideration for publication.

Thank you for considering this journal for the publication of your manuscript. We are sorry to disappoint you on this occasion and wish you success in getting your work published in another journal.

Thank you for your continued patience and support, and we hope you have joined our online community by signing up for our RSS alerts and Twitter https://twitter.com/HTS_Journal page.

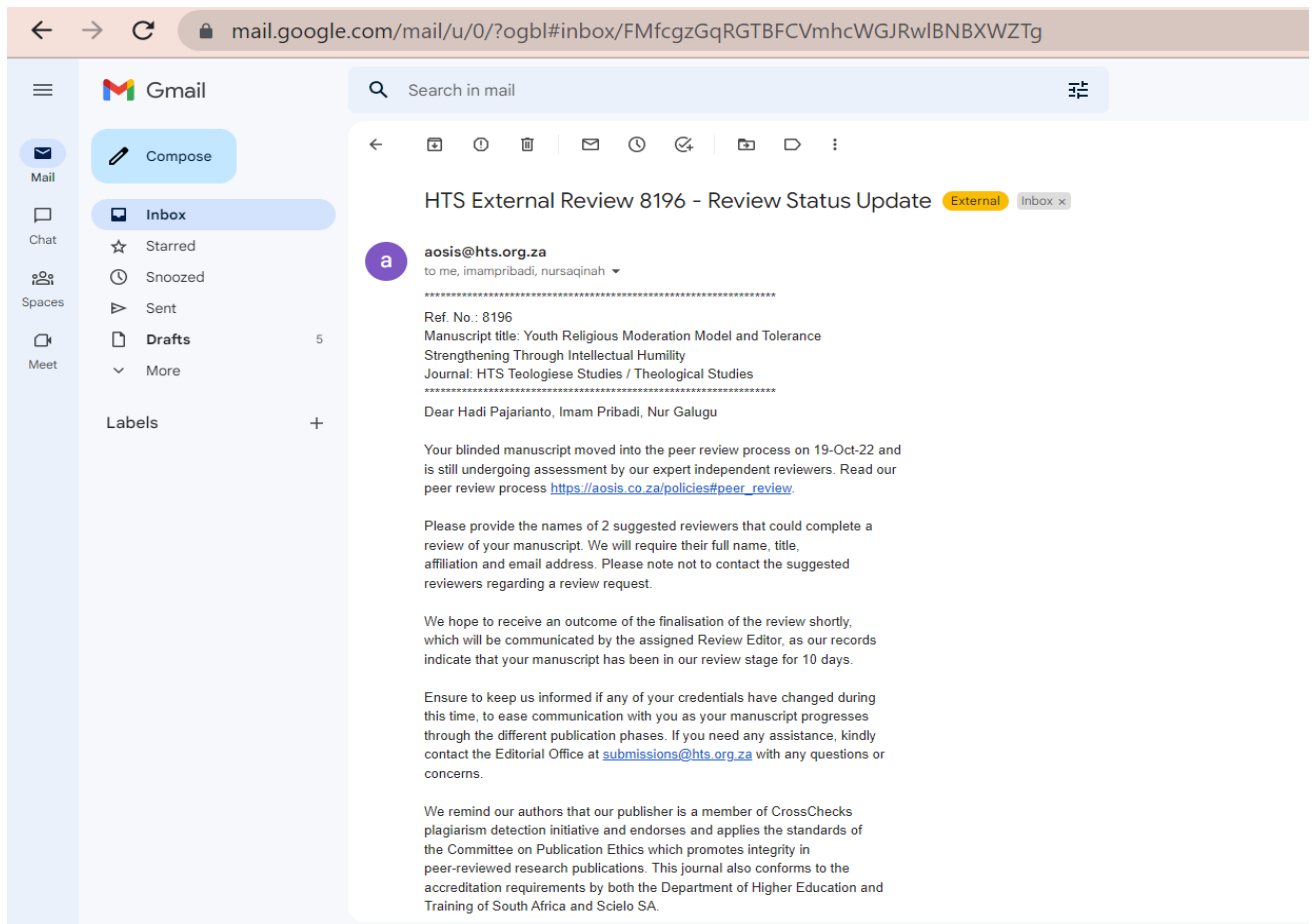

Kind regards,
Ms De Bodi
AOSIS colleague

Give us feedback: Please help us to improve your experience as author by taking a few minutes to tell us about the service that you have received. We appreciate your participation and want to make sure we meet your expectations, which will give us the opportunity to better serve the community.

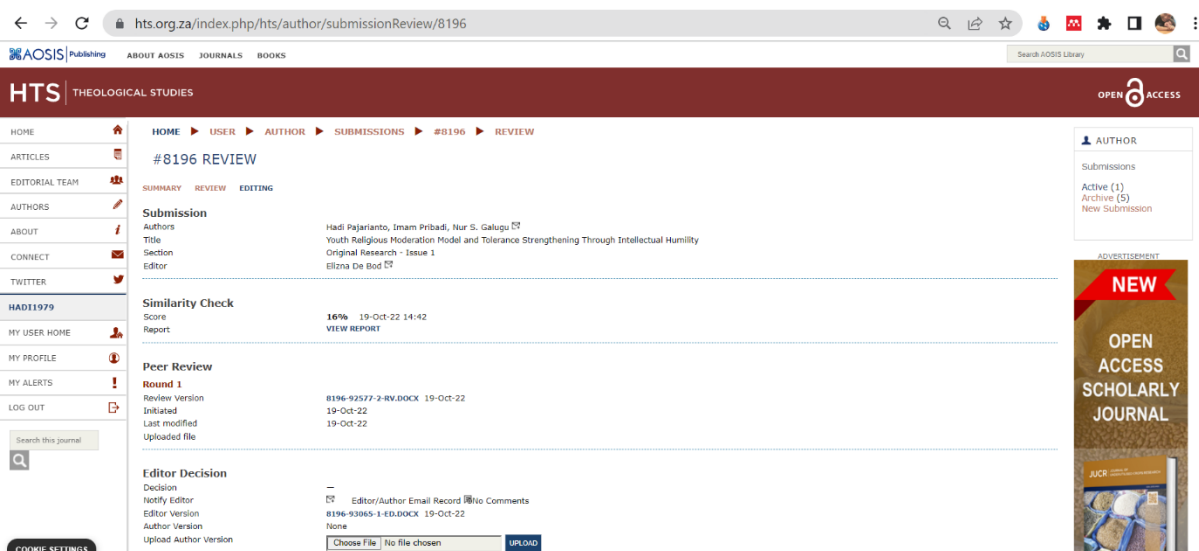

Form:
https://forms.office.com/Pages/ResponsePage.aspx?id=mlUyHQ3TR6uTEQAAz442ombRHOu1_H5eh7SQURDVT6EN1WUWJGDFNR0P2QJ11k&RD=4u

If you are interested to receive publication notifications from the journal, follow us on twitter or register for the RSS feeds.

1. Pada tanggal 08 Oktober disubmit kembali dengan judul: **Youth Religious Moderation Model and Tolerance Strengthening Through Intellectual Humility**, dengan menyertakan model sebagai temuan penelitian secara lengkap.
2. Pada tanggal 19 Oktober 2022, penulis mendapatkan konfirmasi **Review Status Update** untuk masuk pada Blind Review

3. Pada tanggal 19 Oktober 2022 artikel telah masuk pada **IN-REVIEW**.

 Manuscript title: Youth Religious Moderation Model and Tolerance Strengthening Through Intellectual Humility
 Journal: HTS Teologiese Studies / Theological Studies

Dear Prof. Pajarianto

We thank you for the submission of your manuscript. The peer review process of your manuscript has now been completed and we have reached a decision regarding your submission.

At present, your manuscript requires minor revisions to address the concerns of the reviewers. Their comments are attached to the email and/or to the bottom of this letter. If not, for your convenience log onto your profile to view the reviewers' comments.

Please include with your revised submission an itemised, point-by-point response to the reviewers which details the changes made. The revised manuscript should be submitted by 11-Nov-22; if you anticipate that you will be unable to meet this deadline, please notify the Editorial Office.

As a member of the Committee on Publication Ethics, we encourage your participation in assessing your 'Similarity Check Report in your journals' personalised manuscript section. Proceed to rewrite the paraphrased text or to introduce citations and acknowledgements as needed. Our assessment revealed:

Minor overlap shown, refer to report, author to address this before review can be complete.

Below my signature, you will find steps to resubmit your revised manuscript. If you need any assistance, kindly contact the Editorial Office at submissions@hts.org.za with any questions or concerns.

We look forward to receiving the revised manuscript.

Yours sincerely,
 Dr. Botha
 Department of Practical Theology, Faculty of Theology, University of Pretoria

Frequently Asked Question
 How do I view the reviewer comments, after the formal peer review, if the Editor-in-Chief provided feedback regarding my article?

The editor should send you an email stating all the revisions suggested during the formal peer review process. If you are advised to download the comments via your personalised journal section, follow these steps:

- Log into your personalised journal section in the journal.
- Under your 'User Home' click on the 'Author' or 'Active' link that will direct you to your 'Active Submissions Table'
- Under the 'Status Column', click on 'In Review: Revisions Required'. This link takes you to the overview of the peer review process.

The review page of your article provides information and documentation under the heading 'Peer Review', and will identify files by reviewers, e.g. Reviewer B 19-123-1-RV.docx. 2011-08-10. Download these documents to view the reviewer files.

Frequently Asked Question: The Editor-in-Chief has requested revisions to my article. How do I submit my revised version?

When the editor dealing with your submission chooses to ask for a revision, you will be notified by email. In the journal's personalised section your submission will move in the active table from the status 'In Review' to 'In Review: Revisions Required'.

When you prepare a revised version of your manuscript, it is essential that you carefully follow the instructions given in the editor's letter. Use the standard uploading format (as described for original submissions), but include both a clean copy of your manuscript and an annotated copy describing the changes you have made. Failure to do so will cause a delay in the review of your revision.

If references, tables, or figures are moved, added, or deleted during the revision process, renumber them to reflect such changes so that all tables, references (Vancouver Style) and figures are cited in numeric order. Images need only be updated if changes have been made to the figures since the previous version.

The annotated copy should have highlights on the changes (either by using the 'Track Changes' function in Word or by highlighting or underlining text) with comments in the text referring to the editor or reviewer query. Be sure when you upload your annotated version that the changes are clearly visible on the Word (.doc) file prior to resubmission.

You should create a point-by-point response letter specifying how you have addressed each of the editor's and reviewer's comments.

Using the review version of your manuscript, edit and revise your submission according to the reviewers' and editor's comments, and follow the steps:

- When you have addressed the comments and completed your revisions, log into your journals' personalised section and click on 'In Review: Revisions Required'.
- Under the 'Editor Decision', click on the bubble icon to view the editor's decision letter. If needed, you may view the original editor and reviewer comments by clicking files linked under the 'Review Round'.
- Once your revisions are correctly formatted and prepared, click on 'Browse' to begin uploading your revised manuscript from your desktop. Ensure to upload a clean, annotated and point-by-point version as part of your revised manuscript submission.

Once all three documents are uploaded, you will need to inform the editor via email of your resubmission. Click on the email icon and proceed to type and email the editor. Remember to press 'Send'.

For a video detailing the uploading of your revised manuscript see here: https://pkp.sfu.ca/files/author_submission_status_acadiau.mp4

Dear Prof. Pajarianto

The journal has a double-blinded peer review process and your manuscript was assessed by two expert independent reviewers. Read our peer review process https://aosis.co.za/policies#peer_review.

Thank you for your revised manuscript. We have reached a decision regarding your submission. I am pleased to inform you that your manuscript has now been accepted for publication.

The Editorial Office will contact you by 18 November 2022 to finalise your manuscript for the Finalisation and Publication Office. If you need any assistance, kindly contact the Editorial Office at submissions@hts.org.za with any questions or concerns.

We remind our authors that our publisher is a member of CrossChecks plagiarism detection initiative and endorses and applies the standards of the Committee on Publication Ethics which promotes integrity in peer-reviewed research publications. This journal also conforms to the accreditation requirements by both the Department of Higher Education and Training of South Africa and Scielo SA. Be assured that upon publication, your manuscript will be indexed in various international research repositories for further dissemination and reach in readership.

Please help us to improve your experience as an author by taking a few minutes to tell us about the service that you have received. We appreciate your participation and want to make sure we met your expectations, which will give us the opportunity to better serve the community.

Feedback:

Thank you for submitting your interesting and important work to the HTS Teologiese Studies / Theological Studies. We value your contribution to the journal and for the active involvement in the development of the discipline.

Your manuscript will soon form part of this open access publication and your content will be licensed under the Creative Commons Attribution License. We look forward to your future contributions.

Kind regards,
Dr. Botha

Dear Hadi Pajarianto, Imam Pribadi, Nur Galugu

We are pleased to confirm your manuscript's acceptance for publication on 11-Nov-22.

We can also confirm that the Submission and Review Department released your manuscript to our Finalisation Department to commence the various editing processes to secure online publication within the next 90 days (if not sooner).

Kindly note:
1. If you need to make contact with AOSIS Publishing during the finalisation stage of your manuscript, kindly contact us per email or phone.
2. The finalisation procedure works as follows: (a) The first stage is the language editing that is returned to the corresponding Author for review. This will be the final opportunity for the corresponding Author to make text changes to the manuscript. (b) At a later stage, the editorial staff will send the corresponding author one set of galley proofs, at which time the Author will have two working days to mark any typographical errors.
3. Manuscript tracking is available on the submitting authors' journal profile. The submitting Author could visit their home page frequently to assess the stage of the manuscript.

Thank you for your continued patience and support, and we hope you have joined our online community by signing up to our RSS alerts and Twitter page.

Universitas Muhammadiyah Palopo Mail - Article #8196 - Additional Information Required

Hadi Pajarianto <hadipajarianto@umpalopo.ac.id>

Dear Prof. Hadi Pajarianto

Your galley proofs have arrived!

We are excited to share your manuscript in your Author Centre in galley format (PDF) to proofread and review. Kindly ensure to scrutinize the galley proofs well and include any necessary changes at this point, which include, among others:

- Answer all related queries from production staff and editors.
- Pay close attention to deadlines; late submissions can delay publishing.
- Always check author order, author names and affiliations.
- If you introduce text, make only critical changes that might affect conclusions (e.g., data revisions).
- Update any in-press citations if published at the proof stage.
- Correct typos.
- Do not make extensive text changes or move blocks of text.
- Please do not make your changes within the PDF, as we will not be able to track the changes made.

This proof contains notes and queries from production staff and editors that need to be addressed to avoid publication delays. To ensure timely publication of your manuscript, we ask that you do not skip a query and markup the critical and necessary changes due to errors. Your work must reach your intended readership not just as soon as possible but at a quality level that makes your scientific impact in the scholarly community.

Steps to access the galley proofs:

1. Visit the platform by following the link <https://hts.org.za/index.php/hts/author/submissionEditing/8196>
2. Log in to the journal, if required.
3. Select the link labelled 'View Proof' under the heading 'Layout'. You will be able to download the PDF onto your computer or print it.
4. Add changes (typographical and format) by either adding markup and comments on the galley with a PDF viewer application using the HIGHLIGHT TOOL ('How to Use the Comment and Markup Tools in Adobe Acrobat': <https://tinyurl.com/5n7795k5>) or adding your comments to the function 'Proofreading Corrections' on the platform. We prefer markups in the PDF with a comment tool highlighting change requirement. If you struggle with this functionality, you can make your comments in a Word Document. Upload your proofread PDF with markup comments under Step 1: Proofreading. Ensure to upload any figures or tables that need replacing too. You will be able to upload multiple files.
5. Finally, inform me that your proofread PDF is available. In Step 1, proceed to click the email icon under COMPLETE. You will not be able to add any more files after sending this email.

We ask that you respond to this email as an indication that you have received our request. Would you please let me know if an extension is

<https://mail.google.com/mail/u/0/?ik=4cb397865&view=pt&search=all&permthid=thread-f%3A1750724685305563438&siml>

HTS Manuscripts <submissions@hts.org.za>

Fri, Dec 2, 2022 at 8:30 PM

To: Hadi Pajarianto <hadipajarianto@umpalopo.ac.id>

Dear Prof Pajarianto

Thank your corrections. Please could I ask that going forward all corrections and comments are made on the PDF copy and not on the HO document, reason being, all the corrections you made on the HO document have not been proofread or copyedited. Please see below important author instructions that you would have received on the PDF copy. I transferred the corrections onto the PDF this time.

FINAL PROOF CORRECTIONS

This is your final proof of the typeset pages provided in Portable document format (PDF). We direct your attention to the instructions accompanying the proof, especially the requirement that all corrections, revisions, and additions be entered on the proof with comments and not on the word version of the manuscript. You are being asked to correct errors, not to revise the paper. Avoid moving blocks of text or making extensive content-related revision(s). Extensive alteration may require Editorial Board approval, possibly delaying publication. How to: <https://tinyurl.com/5n7795k5>

What we now required from you (on attached PDF):

1. In this article the ethical clearance and data availability statement are incorrect as you worked with focused groups. Please refer to our website: Submission guidelines (hts.org.za) where we give our authors examples of ethical clearance statements and data availability statements.

2. The abbreviations needed to be expanded upon in the footnote of a figure and table.

Have a lovely weekend and we look forward to receiving the additional corrections.

Kind regards

Michele Menezies

Religious moderation is a crucial issue, along with religious and cultural values that develop in society. Religious moderation's success will significantly determine millennial Muslim youth's tolerant attitudes, mediated by intellectual humility. This study aimed to identify and design a model of religious moderation on tolerance by mediating intellectual humility. The research used mixed methods; data analysis used NVivo 12 Plus (software by QSR International), to compile variable nominations; and Partial Least Squares - Structural Equation (PLS-SEM) creates research models. There were 350 Indonesian youth informants in the study, which used interviews and focus group discussions. The results showed that religious moderation in youth, including national commitment, antiviolence and acceptance of local culture, can strengthen tolerance, mediated by intellectual humility. The tolerant attitude shows high and stable data and confirms the strengthening of religious moderation in young people. From the identification, a model of religious moderation in youth was designed and revised, and the results have met all the requirements for modelling so that it can be continued for testing.

Contribution: This research provides essential assistance in implementing religious moderation for young people, which is currently the most prevalent issue in Indonesia. The world needs a moderate religious attitude to become a middle ground for various religious and cultural differences among people globally.

Keywords: Youth; religious; moderation; tolerance; intellectual humility.

Introduction

In various parts of the world, the threat of conflict triggered by differences in ethnicity, ethnicity, race, political affiliation and religious sentiments is still prone to occur, leading to the dominance of the majority over minorities (Rogers 2018; Syarif 2019; Yazdani 2020). Extreme religious attitudes and self-righteousness also cause this condition. Some countries have problems with inter-religious relations; for example, the feud between Muslims and Buddhists has occurred in Sri Lanka and Myanmar. Conflicts between Hindu and Muslim groups in India arose as a result of mutual contempt between religious communities (Frydenlund 2015; Singh 2018). This situation forces humanity into a situation of conflict and even war, which is exhausting. Several studies have found the role of faith-based organisations and religious leaders in promoting peaceful conflict resolution through mediation. Mediation can be done by increasing the meeting point between religious and cultural values. This process is called moderation, choosing a middle way between conflict resolution and peace and strengthening religious relations (Pajarianto 2022; Pajarianto, Pribadi & Sari 2022).

Demographically, Indonesia can potentially see conflict between one religion and the adherents of another because several religions live in this country. Islam is the majority religion, as Catholicism, Protestantism, Hinduism, Buddhism, Confucianism and other beliefs have lived for centuries in the archipelago, not to mention hundreds of tribes with different languages. Indonesia learns from conflicts that take advantage of religious sentiments, such as in Poso, Maluku, Kalimantan and other areas (Hasudungan 2021; Khairil 2017; Zulkifli et al. 2019). Nowadays, tolerance is encouraged by the government and civil society. A survey from Politica Research and Consulting (PRC), conducted by the Indonesian Political Parameter (PPI) in 2022, showed that there is an increase in the value of the situation of ethnic tolerance in Indonesia based on the assessment of these figures, which is 7.32, or in the excellent category. Likewise, the situation of religious tolerance has a value of 6.85. Then the security situation gets a score of 6.83, and the situation of the civil role scores 6.57, the situation of human rights

enforcement scores 6.05 and the economic situation has a value of 6.01 (Purwati, Darisman & Faiz 2022).

Indonesia can be a model for managing potential religious and ethnic conflicts with tolerant religious understanding, attitudes and behaviour so that moderation becomes a unique feature and process (Zakaria 2020). Studies in Pakistan are currently struggling to transform religious moderation in educational curricula to support peace, because education can exacerbate or improve conflict (Kalhoro & Cromwell 2022). In addition, studies in Papua, Indonesia, show that moderation of religious understanding with local wisdom can reduce potential conflict (Rusyaid, Hermanto & Nasir 2022). As a result, religious moderation has become a national policy as a solution to prevent intolerance and radicalism (Subchi et al. 2022). Moderation is the essence of Islam, which is very relevant in the context of diversity in all aspects, religion, customs, ethnicity and the nation itself (Dawing 2017). Religious moderation has at least three dimensions: (1) national commitment, (2) nonviolence and (3) accommodation to local culture. These three indicators can be used to identify how strongly the religious moderation practised by millennials in Indonesia is and how much vulnerability they have (Fahri & Zainuri 2019).

Millennials are defined as those born between 1980 and 1995 (Foot & Stoffman 1996). David Foot is a demographer who based his opinion on them as the 'Baby Boom Echo'. Millennials are said to have a common location in historical time, shaped by historical events and experiences at that time (Gilleard 2004). This conceptualisation of 'generation' is rooted in Mannheim's theory or the sociology of generation, in which members of the same generation share more than the same year of birth. As a result, the environment in which millennials grew up during their formative years influences their values, attitudes and behaviour (Mannheim 1984).

Several researchers have explored the issue of religious moderation, but in general, it is still in the literature review and published in national journals. Firstly, it was conducted by Nuraliah Ali to measure religious moderation descriptively with limited indicators. More indicators can be formulated to determine a person's perspective, attitudes and religious methods (Ali 2020) or to consider other variables as mediation. Secondly, according to Dodego, religious moderation is needed by the Indonesian people because it is simple, it is not rigid and it promotes harmony (Dodego & Witro 2020). Thirdly, the study in Australia by Markus also describes the potential discrimination of millennial youth, but they make good use of opportunities and cultural diversity to understand differences (Markus 2017). Fourthly, Subchi found that religiosity influences religious moderation, which is different from other findings about the adverse effects of religiosity, especially the ritual dimension, on religious tolerance, internally and externally (Subchi et al. 2022). Fifthly, Wolhuter suggests developing a co-existence model of worldviews and life (Wolhuter, Potgieter & Van der Walt 2014). This model evaluates inclusivism, universalism and pluralism, which have shortcomings.

Religious moderation is an essential issue in Indonesia's National Medium-Term Development Plan. It is one of the crucial agendas in countering various acts of intolerance that can occur in the largest multicultural country in the world, like Indonesia. From previous research (research gap) and the development of religious moderation discourse, researchers developed a novelty by including intellectual humility to be considered as a mediation of religious moderation with tolerance. Several recent studies have more specifically found the effect of intellectual humility on religious tolerance. Humility and tolerance are different but related concepts (Krumrei-Mancuso & Rouse 2016). Openness and flexibility in thinking also make it easier for individuals to see from the perspective of others; thus, intellectual humility is more easily formed and strengthens tolerance (Church & Samuelson 2016; Leary et al. 2017). This study aims to identify indicators of the religious moderation model to strengthen tolerance attitudes with intellectual humility mediation and to design a religious moderation model to strengthen tolerance attitudes with intellectual humility mediation.

Methods

In general, this research will carry out the process of identifying and designing the model (Thiagarajan, Semmel & Semmel 1974). This study is qualitative-quantitative descriptive research, taking an educational and religious approach by collecting various themes, cultural focuses, values and symbols in each domain (Spradley 2016). The research model is an unbalanced mixed combination model or concurrent embedded. The concurrent embedded method is a research method that combines qualitative and quantitative research methods by mixing both methods in an unbalanced but independent manner to answer similar problem formulations (Sugiyono 2017).

The data source in this study is the subject from which the data can be obtained (Arikunto 2013; Moleong 2007). Informants were identified using snowball sampling, and as many as 350 people were selected proportionally. In detail, there were 100 students from the western part of Indonesia, 150 students from the centre and 100 from the eastern part. Focus group discussions (FGD) and interviews were used to collect data. The FGD process is carried out in stages: (1) preparation by arranging seating, equipment, notes and group dynamics; (2) facilitation during the meeting, starting with random self-introduction, approval, confidentiality and rules; (3) the discussion process, by recording and observing the discussion, investigating, pondering and observing nonverbal cues; and (4) closing, thanking the FGD participants and resource persons.

Data analysis was carried out using qualitative software, in this case, NVivo 12 Plus, as a computer platform programme developed by QSR International to process data through highlighting, writing notes and linking ideas (Brandão 2015; Edwards-Jones 2014; Göransson et al. 2007; Humble & Radina 2019; Jackson 2021). The stages of data analysis consist of: (1) collecting data, (2) organising data, (3) making memos, (4) coding data, (5) analysing data and (6) displaying data (Woolf & Silver 2018).

To perform the modelling consists of: (1) drawing a path diagram according to the research model framework; (2) testing the outer model to assess the validity and reliability of indicators in measuring the variables (constructs); (3) assessing the goodness-of-fit model to ensure that the processed data fits the estimated model so that the sample used can provide an overview of the actual population conditions; and (4) testing the inner model, which is the stage of testing the influence between variables as a tool to test research hypotheses (Ringle 2015).

Findings and discussion

This study's findings identify young Muslims' views towards tolerance, which are taken from the religious perspective of the Indonesian people, who prioritise moderate attitudes. The researcher identifies the community's views, especially those of young Indonesians, towards tolerance. In the end, this view is taken as the principle and value of the Indonesian people in their attitude, especially towards the value of plurality.

Youth national commitment

National commitment is an attachment to full responsibility to be loyal and grow self-awareness as an Indonesian nation. Without a consistent national commitment from citizens, the state cannot stand upright and achieve the aspirations and hopes of its people. National commitment is related to the attitude of young people towards the symbols of the state and the basic consensus, that is, the agreement of the entire Indonesian nation. Youth's national commitment can be seen in Figure 1.

In Figure 1, the aspect of national commitment from students from the western, central, and eastern parts of Indonesia is relatively the same, but the differences are not too significant. However, there are some aspects to this finding. All young people do not agree with the caliphate (*khilafah*) state because it contradicts the state ideology,

namely Pancasila. *Khilafah* is one of the most massive and crucial issues in Indonesia. One of the mass organisations carrying the caliphate issue is Hizb ut-Tahrir, which claims that they are here to fight what they claim is a secular-capitalist-nationalist system and considers Muslims who believe in democracy to be *kufir*, infidels or even apostates, and those who have embraced democracy deviate from the faith (Valentine, 2010). The government dissolved HTI (*Hisbut Tahrir Indonesia*, an Indonesian Islamic organisation based on Government Regulation in Law Number (*Perppu*) 2 of 2017, namely Law Number 17 of 2013 concerning civil society organisations (CSO). Through this *Perppu*, the government has the authority to prohibit organisations that 'spread ideological or philosophical doctrines that violate Pancasila and the 1945 Constitution'. Previous findings corroborate that as many as 81.5% of millennial youth support and commit to the Unitary State of the Republic of Indonesia (IDN Research Institute 2019). Meanwhile, all youth informants (100%) also considered Pancasila to follow Islamic teachings, and all informants recognised Pancasila as the state ideology.

Youth antiviolence attitude

Antiviolence is one of the pillars of religious moderation that young people must possess. Even now, nonviolent education is developing, which can also be called peaceful education, and is conducted wholeheartedly to educate, not teach. In Figure 2, young people's attitudes towards nonviolence are shown.

In Figure 2, young people from western, central and eastern Indonesia generally show an antiviolence attitude. They will not mediate conflict (4%) if it is on a scale that the local government can handle. If the conflict is widespread, 20% of youth informants from eastern Indonesia will become mediators in the event of a conflict. Two percent of informants are willing to commit acts of violence. They will do so if the religion they believe in is disturbed from the outside. All the informants indicated that they would not do any damage even

FIGURE 1: Youth national commitment.

FIGURE 2: Youth attitude towards anti-violence.

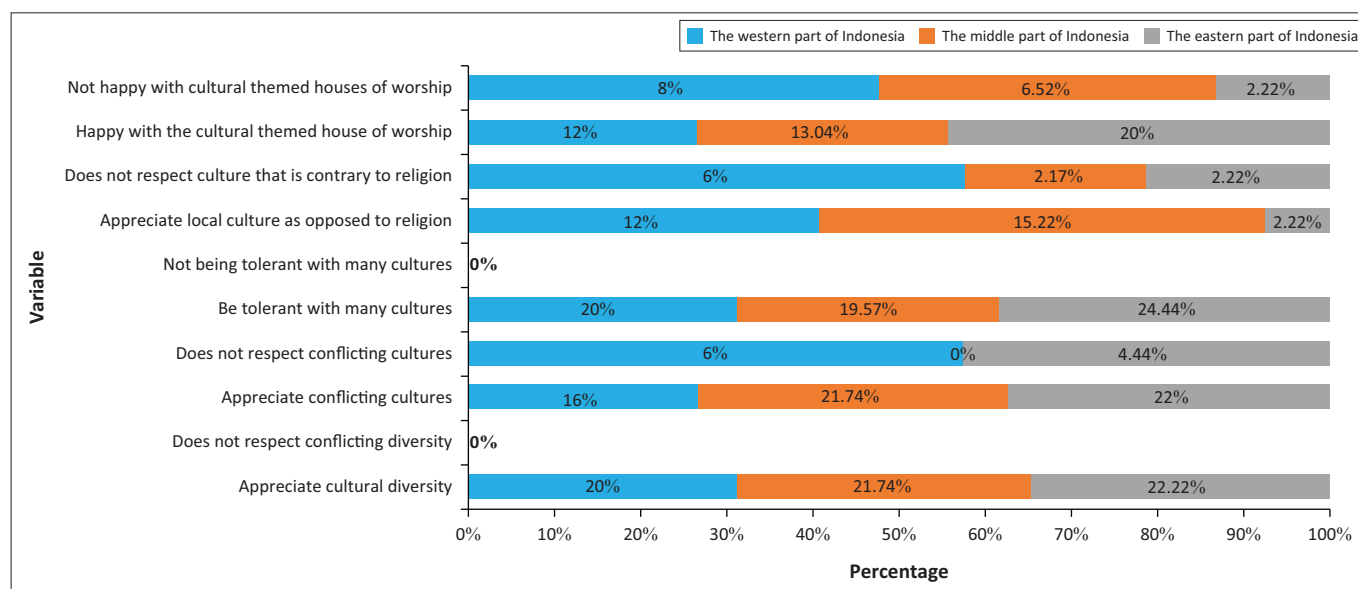

FIGURE 3: Youth attitude of accommodation towards local culture.

though there are illegal places of worship and would leave it to the government to deal with the authority about its legal issue. While attitudes towards violent behaviour are often associated with religion, they disagree. Religion does not teach violence against followers of other religions or houses of worship.

The data explain that young Indonesians have shown a positive attitude towards fighting violence in the name of religion. Violence deviates from behavioural norms, passion, intensity or attitude polarity (Kruglanski & Orehek 2012). In this case, violent extremism can be explained as firmness of belief, willingness to defend a position, firmness of opinion and using violent means. They tend to refuse and position themselves as mediators in every conflict.

Youth attitudes towards local culture

Local cultural diversity is a social phenomenon that can shape each region’s cultural character and image. Every

society has a local culture inherent in the community, including young people. Local culture arises when residents of an area already have the same mindset and social life, so it becomes a habit that distinguishes them from other residents.

In Figure 3, young people’s answers to the culture generally show the same character. There are indicators of a strengthened attitude of respect for local culture, which is the fundamental value of their lives. Young people from eastern Indonesia showed a more positive attitude towards houses of worship with cultural themes (20%). Furthermore, regarding tolerance of various cultures that grow in their environment, young people from eastern Indonesia also show a higher attitude, as much as 24.44%. This is because, in eastern Indonesia, various local cultures are still relatively well preserved and live in a pluralistic socioreligious situation. Likewise, concerning culture, young people from eastern Indonesia appreciate the various culture in their surroundings with 22.22%.

FIGURE 4: Youth tolerance.

Local culture, in several studies, can be used as a glue for differences between religions and become unique in Indonesia (Pajarianto et al. 2022). Moderate people tend to be more accepting of local traditions and culture in their religious behaviour, as long as they do not conflict with the central teachings of religion. Indonesian society is rich in local culture that adapts and manages resources for mutual prosperity (Pesurnay 2018), often associated with myths even though it grows dynamically following human innovation and creativity (Effendi 2019). It is essential to revitalise local culture by strengthening tolerance for various Indonesian treasures.

Youth tolerance

In Figure 4, the findings of the informants' answers on the tolerance attitude of young people show that there are different perceptions and responses about tolerance. Western Indonesian informants show that; they believe that people from different streams or mazhabs can be good citizens (9.80%) while unsure of values (9.80%). Do not believe that people of other religions are good citizens (7.84%); believe that people of different religions are good citizens (11.76%). It does not support the construction of places of worship (1.96%) but supports the construction of places of worship (17.65%). They were not feeling comfortable with other streams and organisations (1.96%), feeling comfortable with other streams and organisations (17.65%). Do not feel comfortable with other groups (0%) and feel comfortable with other religious groups (21.57%).

The middle part of the Indonesian informant shows that; they do not believe that people from different streams or mazhabs can be good citizens (12.24%) and believe in values (18.16%). Do not believe that people of other religions are good citizens (10.20%); believe that people of different religions are good citizens (10.20%). It does not support the construction of places of worship (6.12%) but supports the construction of places of worship (14.24%). Don't feel comfortable with other streams and organisations (4.08%),

feel comfortable with other streams and organisations (16.33%). Do not feel comfortable with other groups (4%) and feel comfortable with other religious groups (14.29%).

Eastern Indonesian informants show that; they do not believe that people from different streams or mazhabs can be good citizens (4.08%) and believe in values (16.33%). Do not believe that people of other religions are good citizens (0%); believe that people of different religions are good citizens (20.41%). It does not support the construction of places of worship (4.08%) but supports the construction of places of worship (14.29%). They were not feeling comfortable with other streams and organisations (14.29%), feeling comfortable with other streams and organisations (16.33%). Do not feel comfortable with other groups (12.24%) and feel comfortable with other religious groups (8.16%).

The attitude of not believing that people of different religions do not make good citizens because there are schools of thought or certain groups that are not in line with the Indonesian government system. Hence, the views of these groups are limited and only look at it from one religious lens even though the world's religions have the resources to respect religious freedom (Kärkkäinen, 2017) and have universal views whose values can be accepted by all adherents of religions.

Attitude of young people's intellectual humility

Intellectual humility (intellectually) is often considered one factor in how someone learns something new, because humility involves acknowledging one's limitations, including ignorance of something. Young people must have this attitude, as social skills are needed in the field of work or to stem the flow of radicalism that can arise from an attitude of self-righteousness and claiming that others are wrong. Thus, this attitude is very relevant as a mainstream viewpoint among young people.

In Figure 5, Muslim youth informants have several variants of attitudes towards different views. Western Indonesian informants are motivated to learn if they do not understand

FIGURE 5: The attitude of intellectual humility.

(20%), do not mind being taught (20%), welcome new views (20%) and are open to revising their views (20%); some are offended when someone disagrees (4%), and others are not offended by people who disagree (16%). In this aspect, all informants do not mind being given information, taught and learning from others, as well as welcoming new views even though they are different. It can also be seen in the readiness of all informants to revise their views if they are wrong, which indicates that young people's intellectual humility is high and stable. These views are not much different from those of the informants in the central and eastern parts.

These results are relevant to several findings on humility and religiosity regarding religious tolerance (Hook et al. 2017; Krumrei-Mancuso 2018; Leary et al. 2017; Rodriguez et al. 2017; Zhang et al. 2018). From these results, it can be concluded that there is a successful application of the concept of religious moderation (Muhtifah et al. 2021). Thus, intellectual humility is easier to form and strengthens tolerance (Church & Samuelson 2016; Leary et al. 2017). It is what can be offered because, from the research results, the potential for young people to be exposed to radicalism is also quite high (Nafi'a et al. 2022). Nowadays, intellectual humility in religion is difficult to find, so what happens is that one feels self-righteous, which makes it easy to disbelieve in others and makes it challenging to dialogue with other religions. In the end, it is social learning.

Developing a model of religious moderation for young people

The preparation of the model takes into account the stages in the PLS-SEM (Partial Least squares-Structural Equation) analysis (Ringle, 2015) as follows; the first step is with CFA analysis (Confirmatory Factor Analysis) with the Smart PLS program, consisting of several stages: Convergent Validity, Discriminant Validity, and Composite Reliability.

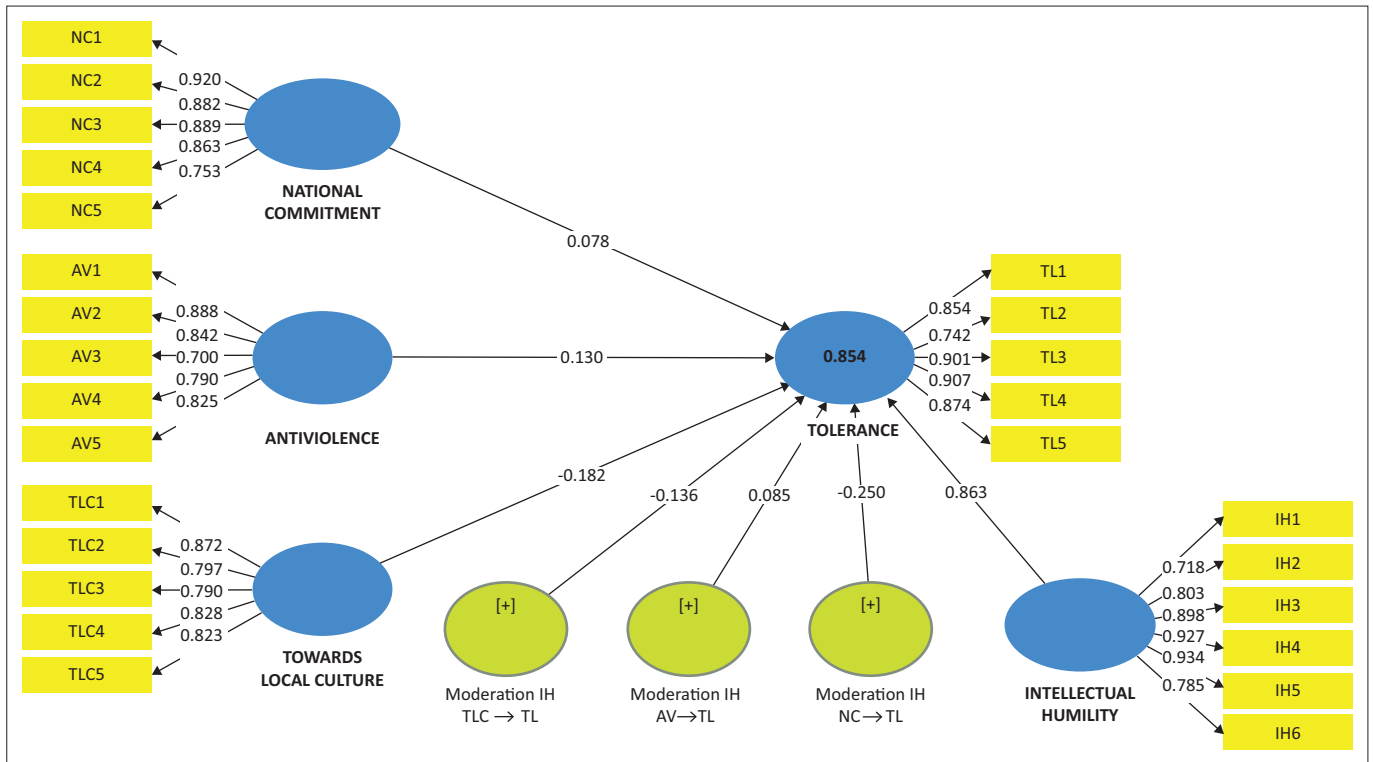

The results of the PLS analysis can be used to test the research hypothesis if all indicators in the PLS model have met the requirements of convergent validity, discriminant validity, and composite reliability. The estimation results of the PLS model with algorithmic techniques can be seen in the following figure.

In the second step, the researcher conducted a convergent validity test by looking at the loading factor value of each indicator on the construct. Because this is confirmatory, the limit for the loading factor used is 0.7. The loading factor value can be seen in Table 1.

Based on the analysis in Table 1, the results show that all indicators have a loading factor value > 0.7 , which means that all indicators can be used to measure the construct; no indicators must be excluded because all indicators have met the validity criteria required. In addition to looking at the loading factor value of each indicator, convergent validity must also be assessed from the average variance extracted (AVE) value of each construct; all constructs in the PLS model are declared to have met convergent validity if the AVE value of each construct is > 0.5 . The complete AVE value of each construct can be seen in Table 2.

Based on the results of the PLS analysis in Table 2, after invalid indicators were removed from the model, all indicators were valid in measuring the construct. Then, assessed from the AVE value, all constructs also had an AVE value exceeding 0.5, which means that all construct indicators have met the required convergent validity criteria. The analysis stage is continued at the discriminant validity test stage.

The third step, discriminant validity, is carried out to ensure that each concept of each latent variable is different from the

AV, antiviolence; IH, intellectual humility; NC, national commitment; TLC, towards local culture; TL, tolerance.

FIGURE 6: Estimation results of the partial least squares algorithm model.

TABLE 1: Loading factor value on convergent validity test.

Variable	Indicator	Loading factor	Cut value	Convergent validity
National commitment	NC-1	0.920	0.7	Valid
	NC-2	0.882	0.7	Valid
	NC-3	0.869	0.7	Valid
	NC-4	0.863	0.7	Valid
	NC-5	0.753	0.7	Valid
Accommodation towards local culture	TLC-1	0.872	0.7	Valid
	TLC-2	0.797	0.7	Valid
	TLC-3	0.790	0.7	Valid
	TLC-4	0.828	0.7	Valid
	TLC-5	0.823	0.7	Valid
Antiviolence	AV-1	0.888	0.7	Valid
	AV-2	0.842	0.7	Valid
	AV-3	0.700	0.7	Valid
	AV-4	0.790	0.7	Valid
	AV-5	0.825	0.7	Valid
Intellectual humility	IH-1	0.718	0.7	Valid
	IH-2	0.803	0.7	Valid
	IH-3	0.898	0.7	Valid
	IH-4	0.927	0.7	Valid
	IH-5	0.934	0.7	Valid
	IH-6	0.785	0.7	Valid
Tolerance	TL-1	0.854	0.7	Valid
	TL-2	0.742	0.7	Valid
	TL-3	0.901	0.7	Valid
	TL-4	0.907	0.7	Valid
	TL-5	0.874	0.7	Valid

AV, antiviolence; IH, intellectual humility; NC, national commitment; TLC, towards local culture; TL, tolerance.

other variables. The model has good discriminant validity if the AVE square value of each exogenous construct exceeds the correlation between the construct and other constructs. The results of the discriminant validity test are obtained as follows:

TABLE 2: Construct average variance extracted (AVE) value.

Construct	AVE
TLC	0.676
AV	0.659
IH	0.719
NC	0.739
MOD_TLC	1.000
MOD_AV	1.000
MOD_NC	1.000
TL	0.736

TLC, accommodation toward local culture; AV, anti violence; IH, intellectual humility; NC, national commitment; MOD_TLC, moderation accommodation toward local culture; MOD_AV, moderation_anti violence; MOD_NC, moderation_national commitment; TL, tolerance.

Based on the results of the discriminant validity test in the Table 3, it was found that the square root value of the AVE of all constructs consistently exceeded the correlation coefficient of the construct with other constructs. So it can be concluded that all constructs in this PLS model have met the required discriminant validity.

In addition to using the Fornell–Larcker method, discriminant validity can be seen from the cross-loading value of each indicator to the construct. The indicator is declared to meet the discriminant validity criteria if the cross-loading indicator to the construct is higher than the cross-loading indicator value to other constructs.

The results of the two discriminant validity tests showed that the outer PLS model has met the required discriminant validity criteria. Based on the results of the discriminant validity test in Table 4, it can be seen that all indicators had

TABLE 3: Discriminant validity according to the Fornell–Larcker test.

TL5	0.785	0.718	0.849	0.668	0.874

TLC, accommodation toward local culture; AV, anti violence; IH, intellectual humility; NC, national commitment; TL, tolerance.

the highest indicators in their constructs, not in other constructs, so it can be stated that all indicators have met the requirements of discriminant validity. For example, the TL5 indicator had a cross-loading of 0.874 to the construct (TL), while for the other constructs, the cross-loading of TL5 was lower than 0.874, which was 0.785 for the ABL construct, 0.718 for the AK, 0.849 for the IH and 0.668 for the KK, so that it can be stated that the discriminant validity of the TL5 was fulfilled.

The fourth step was to carry out construct reliability, which can be assessed from Cronbach's alpha value and the composite reliability value of each construct. The recommended value of composite reliability and Cronbach's alpha is more than 0.7. However, in development research, because the limit of the loading factor used is low (0.5), the value of composite reliability and low Cronbach's alpha are still acceptable as long as the requirements for

TABLE 5: Composite reliability.

convergent validity and validity are met. Discriminant validity has been met.

Based on the analysis results in Table 5, the composite reliability value of all constructs also exceeded 0.7. This indicates that all constructs have met the required reliability, so it can be concluded that all constructs were reliable, while based on Cronbach's alpha value, the performance was still below 0.7. It can be ignored. The performance construct can still be considered reliable because the reliability measurement using the composite reliability value is considered better than the reliability measurement using Cronbach's alpha. With steps taken systematically, the preparation of the model has met the requirements so that it can be continued with model testing.

Relying on this research model, preparing religious moderation education for young people is essential by combining various approaches, including strengthening intellectual humility, which will impact tolerance. The alternative is an integrative religious moderation intervention, namely by combining psychological and counter-ideological support programmes, increasing critical, open and reflective thinking skills (Milla, Putra & Umam 2019; Milla & Umam 2019), open-mindedness as one of the intellectual humility abilities (Kruglanski et al. 2018), psychological support through identity strengthening and counselling (Bouzar & Martin 2016) and an emphasis on cognitive complexity. In other research, young Indonesians agree with tolerance as much as 93%; they view intolerance as a terrible value (Pandey 2020). In future research, these aspects will be considered to test the model of religious moderation in youth.

Conclusion

This study concludes that intellectual humility is needed to mediate religious moderation, which consists of national commitment, antiviolence and accommodation of local culture towards youth tolerance. The data coding shows that intellectual humility attitudes mediate antiviolence attitudes towards groups and communities. Antiviolence attitudes towards groups encourage accommodative attitudes towards the local culture and impact tolerance in the aspect of national commitment that strengthens tolerance with mediation from intellectual humility. With this finding, the religious moderation programme must consider the integration of all disciplines in developing a model of religious moderation that is relevant to the needs of dynamic youth. The preparation of the model of religious moderation in this research has fulfilled all the requirements, so it can be continued for testing.

Theoretically and practically, this research contributes to the development of a model of religious moderation which is currently only dominated by faith and belief in the teachings of the scriptures. The religious attitudes of young people must be moderated with various instruments that suit their unique and distinctive needs amidst the rapid development of digitalization.

Acknowledgements

Thank you to the Ministry of Education, Culture, Research and Technology of the Republic of Indonesia for funding this research. The same goes for all the young people who became informants in this study.

Competing interests

The authors declare that they have no financial or personal relationships that may have inappropriately influenced them in writing this article.

Authors' contributions

H.P., I.P. and N.S.G. were all involved in the preparation, research design, data collection, analysis and article writing.

Ethical considerations

This article followed all ethical standards for research.

Funding information

This research was funded by the Ministry of Education, Culture, Research and Technology of Indonesia.

7 **Youth Religious Moderation Model and Tolerance Strengthening Through Intellectual** 8 **Humility**

9 **Abstract**

10 Religious moderation is a crucial issue, along with religious and cultural values that develop in
11 society. The success of religious moderation will significantly determine the tolerance attitude
12 of millennial Muslim youth mediated by intellectuals' humility. This study aims to identify and
13 design a model of religious moderation on tolerance by mediating intellectual humility. The
14 research method uses mixed methods, data analysis uses Nvivo 12 plus to compile variable
15 nominations, and SEM PLS creates research models. There were 350 Indonesian youth
16 informants using interviews and focus group discussions. The results show that religious
17 moderation in youth, including national commitment, anti-violence, and acceptance of local
18 culture, can strengthen tolerance mediated by intellectual humility. The tolerance attitude
19 shows high and stable data and confirms the strengthening of religious moderation in young
20 people.

21 **Contribution:** This research has essential assistance in implementing religious moderation for
22 young people, which is currently the most prevalent issue in Indonesia. The world needs a
23 moderate religious attitude to become a middle ground for various religious and cultural
24 differences among people globally.

25
26 **Keywords:** Youth, Religious, Moderation, Tolerance, Intellectual Humility

27

28 Introduction

29

30 In various parts of the world, the threat of conflict triggered by differences in ethnicity,
31 ethnicity, race, political affiliation, and religious sentiments is still prone to occur, leading to
32 the dominance of the majority over minorities (Rogers, 2018; Syarif, 2019; Yazdani, 2020).
33 Extreme religious attitudes and self-righteousness also cause this condition. Some countries
34 have problems with inter-religious relations; for example, the feud between Muslims and
35 Buddhists have occurred in Sri Lanka and Myanmar. Conflicts between Hindu and Muslim
36 groups in India arose as a result of mutual contempt between religious communities
37 (Frydenlund, 2015; Singh, 2018). This situation forces humanity into a situation of conflict and
38 even war that, which is exhausting. Several studies have found the role of faith-based
39 organisations and religious leaders in promoting peaceful conflict resolution through
40 mediation. Mediation can be done by increasing the meeting point between religious and
41 cultural values. This process is called moderation, choosing a middle way between conflict
42 resolution and peace and strengthening religious relations (Pajarianto, 2022; Pajarianto,
43 Pribadi, Sari, et al., 2022).

44

45 Indonesia has a critical demographic for conflict between adherents of one religion and
46 adherents of another religion due to its diversity of religions. Islam is the majority religion,
47 Catholicism, Protestantism, Hinduism, Buddhism, Confucianism, and beliefs that have lived
48 for centuries in the archipelago, not to mention hundreds of tribes with different languages.
49 Learning from conflicts that take advantage of religious sentiments, such as in Poso, Maluku,
50 Kalimantan, and other areas. Nowadays, tolerance is encouraged by the government and civil
51 society. A survey from Politica Research and Consulting (PRC), conducted by the Indonesian
52 Political Parameter (PPI) in 2022, showed that there is an increase in the value of the situation
53 of ethnic tolerance in Indonesia based on the assessment of these figures, which is 7.32, or in
54 the excellent category. Likewise, the situation of religious tolerance has a value of 6.85. Then
55 the security situation gets a score of 6.83 and the situation of the civil role (6.57), the situation
56 of human rights enforcement (6.05), and the economic situation (6.01) (Purwati et al., 2022).

57

58 **Indonesia** can be a model for managing potential religious and ethnic conflicts with
59 tolerant religious understanding, attitudes, and behaviour so that moderation becomes a unique
60 feature and process (Zakaria, 2020). As a result, religious moderation has become a national

Commented [A1]: Please provide studies which investigate religious moderation to against conflict.

61 policy as a solution to prevent intolerance and radicalism (Subchi et al., 2022). Moderation is
62 the essence of Islam, which is very relevant in the context of diversity in all aspects, religion,
63 customs, ethnicity, and the nation itself (Dawing, 2017). Religious moderation has at least three
64 dimensions, namely: 1) national commitment; 2) non-violence; and 3) accommodating to local
65 culture. These three indicators can be used to identify how strong the religious moderation
66 practised by millennials in Indonesia is and how much vulnerability they have (Fahri & Zainuri,
67 2019). Millennials are defined as those born between 1980 and 1995 (Foot & Stoffman, 1996).
68 David Foot is a demographer who based his opinion on them as the “Baby Boom Echo.”
69 Millennials are said to have a common location in historical time, shaped by historical events
70 and experiences at that time (Gilleard, 2004). This conceptualization of "generation" is rooted
71 in Mannheim's theory or the sociology of generation, in which members of the same generation
72 share more than the same year of birth. As a result, the environment in which Millennials grew
73 up during their formative years influences their values, attitudes, and behaviour (Mannheim,
74 1984).

75
76 Several researchers have explored the issue of religious moderation, but in general, it is
77 still in the literature review and published in national journals. First, it was conducted by
78 Nuraliah Ali to measure religious moderation descriptively with limited indicators. More
79 indicators can be formulated to determine a person's perspective, attitudes, and religious
80 methods (Ali, 2020), or consider other variables as mediation. Second, according to Dodego,
81 religious moderation is needed by the Indonesian people because it is simple, and not rigid, and
82 promotes harmony (Dodego & Witro, 2020). Third, the study in Australia by Markus also
83 describes the potential discrimination of millennial youth, but they make good use of
84 opportunities and cultural diversity to understand differences (Markus, 2017). Fourth, Subchi
85 found that religiosity influences religious moderation, which is different from other findings
86 about the adverse effects of religiosity, especially the ritual dimension, on religious tolerance,
87 internally and externally (Subchi et al., 2022). Fifth, Wolhuter suggests developing a
88 coexistence model of worldviews and life (Wolhuter et al., 2014). This model evaluates
89 inclusivism, universalism, and pluralism, which have shortcomings.

90
91 Religious moderation is an essential issue in Indonesia's National Medium-Term
92 Development Plan. It is one of the crucial agendas in countering various acts of intolerance that
93 can occur in the largest multicultural country in the world, like Indonesia. From previous

94 research (research gap) and the development of religious moderation discourse, researchers
95 developed a novelty by including intellectual humility to be considered as a mediation of
96 religious moderation with tolerance. Several recent studies have more specifically found the
97 effect of intellectual humility on religious tolerance. Humility and tolerance are different but
98 related concepts (Krumrei-Mancuso & Rouse, 2016). Openness and flexibility in thinking also
99 make it easier for individuals to see from the perspective of others; thus, intellectual humility
100 is more easily formed and strengthens tolerance (Church & Samuelson, 2016; Leary et al.,
101 2017). This study aims to identify indicators of the religious moderation model to strengthen
102 tolerance attitudes with intellectual humility mediation and to design a religious moderation
103 model to strengthen tolerance attitudes with intellectual humility mediation.

104

105 **Methods**

106

107 In general, this research will carry out the process of identifying and designing the model
108 (Thiagarajan et al., 1974). This study is qualitative-quantitative descriptive research with an
109 educational and religious approach by collecting various themes, cultural focuses, values, and
110 symbols in each domain (Spradley, 2016). The research model is an unbalanced mixed
111 combination model or concurrent embedded. The Concurrent embedded method is a research
112 method that combines qualitative and quantitative research methods by mixing both methods
113 unbalanced but independently to answer similar problem formulations (Sugiyono, 2017).

114

115 The data source in this study is the subject from which the data can be obtained (Arikunto,
116 2013; Moleong, 2007). Informants were identified using snowball sampling, and as many as
117 350 people were selected proportionally. In details, there are 100 students from the western
118 part of Indonesia, 150 students from the center, and 100 from the eastern part. Focus Group
119 Discussions (FGD) and interviews were used to collect data.

120

121 Data analysis was carried out using qualitative software, in this case, nVivo 12 plus, as a
122 computer assistance programme developed by QSR International to process data through
123 highlighting, writing notes, and linking ideas (Brandão, 2015; Edwards-Jones, 2014;
124 Göransson et al., 2007; Humble & Radina, 2019; Jackson, 2021). The stages of data analysis

Commented [A2]: Please provide information the participants in this study and give information the process of collect data.

125 consist of; (1) collecting data, (2) organising data, (3) making memos, (4) coding data, (5)
126 analysing data, and (6) displaying data (Woolf & Silver, 2018).

127

128 To perform the modeling consists of (1) drawing a path diagram according to the research
129 model framework; (2) testing the outer model to assess the validity and reliability of indicators
130 in measuring the variables (constructs); (3) assessing the goodness of fit model to ensure that
131 the processed data fits the estimated model so that the sample used can provide an overview of
132 the actual population condition; and (4) testing the inner model, which is the stage of testing
133 the influence between variables as a tool to test research hypotheses (Ringle, 2015).

134

135 **Findings and Discussion**

136

137 This study's findings identify young Muslims' views towards tolerance, which are taken
138 from the religious perspective of the Indonesian people who prioritise moderate attitudes. The
139 researcher identifies the community's views, especially young Indonesians, towards tolerance.
140 In the end, this view is taken as the principle and value of the Indonesian people in their attitude,
141 especially towards the value of plurality.

142

143 **Youth National Commitment**

144

145 National commitment is an attachment to full responsibility to be loyal and grow self-
146 awareness as an Indonesian nation. Without a consistent national commitment from citizens,
147 the state cannot stand upright and achieve the aspirations and hopes of its people. National
148 commitment is related to the attitude of young people towards the symbols of the state and the
149 basic consensus, that is, the agreement of the entire Indonesian nation. Youth's national
150 commitment can be seen in Figure 2 below:

151

152

Figure 2. National Commitment

153

154

155

156

157

158

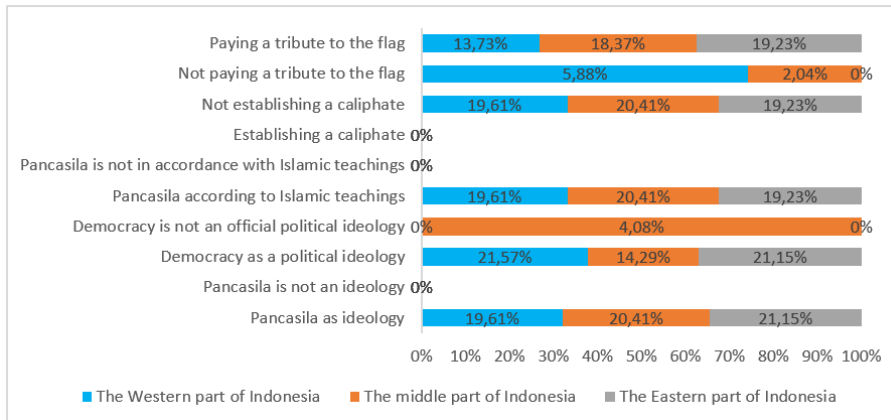

159

160

161

162

163

164 In Figure 2, the aspect of national commitment from students from the western, central,
165 and eastern parts of Indonesia is relatively the same, but the differences are not too significant.
166 However, there are some aspects to this finding. All young people do not agree with the
167 caliphate state because it contradicts the state ideology, namely Pancasila. Khilafah is one of
168 the most massive and crucial issues in Indonesia. One of the mass organisations carrying the
169 caliphate issue is Hizb ut-Tahrir, which claims that they are here to fight what they claim is a
170 secular-capitalist-nationalist system and considers Muslims who believe in democracy to be
171 kufr, infidels, or even apostates, and those who have embraced democracy. Deviate from the
172 faith (Valentine, 2010). The government dissolved HTI based on Government Regulation in
173 Law Number (Perppu) 2 of 2017, namely Law Number 17 of 2013 concerning Civil Society
174 Organizations (CSO). Through this Perppu, the government has the authority to prohibit
175 organisations that “spread ideological or philosophical doctrines that violate Pancasila and the
176 1945 Constitution”. Previous findings corroborate that as many as 81.5% of millennial youth
177 support and commit to the Unitary State of the Republic of Indonesia (IDN Research Institute,
178 2019). Meanwhile, all informants (100%) of young people also considered Pancasila to follow
179 Islamic teachings, and all informants recognised Pancasila as the state ideology.

180

181 **Anti-Violence**

182

183 Anti-violence is one of the pillars of religious moderation that young people must possess.
184 Even now, non-violent education is developing, which can also be called peaceful education,
185 and is done wholeheartedly to educate, not teach. In figure 3, young people's attitudes towards
186 non-violence are shown.

187

188

Figure 3. Attitude of Anti-Violence

189

190

191

192

193

194

195

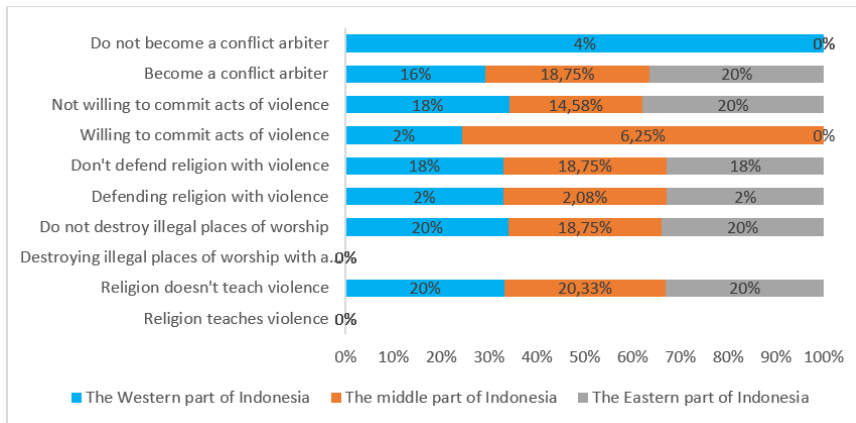

196

197

198

199

200

201 In the picture above, young people from western, central, and eastern Indonesia generally
202 show an anti-violence attitude. They will not mediate conflict (4%) if it is on a scale that the
203 local government can handle. If the conflict is widespread, 20% of youth informants from
204 Eastern Indonesia will become mediators in the event of a conflict. 2% of informants are willing
205 to commit acts of violence. They will do so if the religion they believe in is disturbed from the
206 outside. All the informants indicated that they would not do any damage even though there are
207 illegal places of worship and would leave it to the government to complete the legality. While
208 attitudes towards violent behaviour are often associated with religion, they disagree. Religion
209 does not teach violence against followers of other religions or houses of worship.

210

211 The data explains that young Indonesians have shown a positive attitude toward fighting
212 violence in the name of religion. Violence deviates from behavioural norms, passion, intensity,
213 or attitude polarity (A. W. Kruglanski & Orehek, 2012). In this case, violent extremism can be
214 explained as firmness of belief, willingness to defend a position, firmness of opinion, and using
215 violent means. They tend to refuse and position themselves as mediators in every conflict.

216

217 **Youth Attitudes Towards Local Culture**

218

219 Local cultural diversity is a social phenomenon that can shape each region's cultural
220 character and image. Every society has a local culture inherent in the community, including
221 young people. Local culture arises when residents of an area already have the same mindset
222 and social life, so it becomes a habit that distinguishes them from other residents.

223

Abstract: 172 words; Main Text: 4596 words; References: 53; Tables: 5; Figures: 6

224 **Figure 4. The attitude of accommodation toward local culture**

236 In Figure 4, young people's answers to the culture generally show the same character.
237 There are indicators of a strengthened attitude of respect for local culture, which is the
238 fundamental value of their lives. Young people from eastern Indonesia showed a higher attitude
239 towards houses of worship with cultural themes (20%). Furthermore, regarding tolerance of
240 various cultures that grow in their environment, young people from eastern Indonesia also show
241 a higher attitude, as much as 24.44%. It is because, in eastern Indonesia, various local cultures
242 are still relatively well preserved and live in a pluralistic socio-religious situation. Likewise,
243 for respect for culture, young people from eastern Indonesia, with 22.22%.

244
245 Local culture, in several studies, can be used as a glue for differences between religions
246 and become unique in Indonesia (Pajarianto, Pribadi, & Sari, 2022; Pajarianto, Pribadi, Sari, et
247 al., 2022). Moderate people tend to be more accepting of local traditions and culture in their
248 religious behaviour as long as they do not conflict with the central teachings of religion.
249 Indonesian society is rich in local culture that adapts and manages resources for mutual
250 prosperity (Pesurnay, 2018), often associated with myths even though it grows dynamically
251 following human innovation and creativity (Effendi, 2019). It is essential to revitalise local
252 culture by strengthening tolerance for various Indonesian treasures.

253

254 **Youth Tolerance**

255

256 Young people today live in a very fast-paced world, especially with the development of
257 technology and digital information. Apart from having negative potential, this development
258 has a positive impact on their perspective on humans or different groups.

259

260

261

Figure 5. Youth Tolerance

262

263

264

265

266

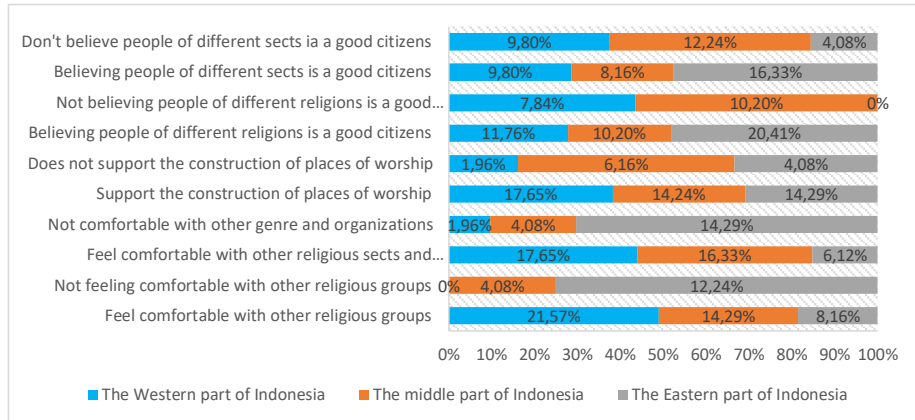

267

268

269

270

271

272 The informants' answers on the tolerance attitudes of young people show that there are
273 different perceptions and answers about tolerance. Informants from western Indonesia
274 indicated that; they believe that people from different sects/schools can become good citizens
275 (9.80%) while not sure about the value (9.80). Do not believe people of different religions to
276 be good citizens (7.84%); believe people of different religions to be good citizens (11.76%). It
277 does not support the construction of places of worship (1.96%) but supports the construction
278 of places of worship (17.65%). Other schools and organisations make me uncomfortable
279 (1.96%); other schools and organisations make me comfortable (17.65%). The participants also
280 do not feel comfortable with other groups (0%) and feel comfortable with other religious
281 groups (21.57%).

282
283 Central Indonesian informants indicate that; they do not believe that people from different
284 sects/schools can become good citizens (12.24%) and believe in values (18.16%). They do not
285 believe people of different religions to be good citizens (10.20%). They do not believe people
286 of different religions to be good citizens (10.20%). It does not support the construction of places
287 of worship (6.12%) but supports the construction of places of worship (14.24%). They are not
288 comfortable with other schools and organisations (4.08%) and feel comfortable with other
289 schools and organisations (16.33%). Do not feel comfortable with other groups (4%) and feel
290 comfortable with other religious groups (14.29%).

291
292 Eastern Indonesia informants indicate that; they do not believe that people from different
293 sects/schools can become good citizens (4.08%) and believe in values (16.33%). They do not
294 believe people of different religions to be good citizens (0%); they believe people of different
295 religions to be good citizens (20.41%). It does not support the construction of places of worship
296 (4.08%) but supports the construction of places of worship (14.29%). Do not feel comfortable
297 with other schools and organisations (14.29%) or with other schools and organisations
298 (16.33%). Do not feel comfortable with other groups (12.24%) and feel comfortable with other
299 religious groups (8.16%).

300
301 The attitude of not believing people of different religions are not good citizens because
302 certain sects or groups are not in line with the Indonesian government system, thus judging that
303 the views of these groups are limited and only seeing them from one religious perspective.

304 Whereas religions worldwide have the resources to respect religious freedom (Kärkkäinen,
305 2017), and have universal views whose values can be accepted by all religious adherents.

306

307 **The Attitude of Young People's Intellectual Humanity**

308

309 Intellectual humility (intellectually) is often considered one factor in how someone learns
310 something new because humility involves acknowledging one's limitations, including
311 ignorance of something. Young people must have this attitude as social skills are needed in the
312 field of work or to stem the flow of radicalism that can arise from an attitude of self-
313 righteousness and claiming that others are wrong. Thus, this attitude is very relevant as a
314 mainstream viewpoint among young people.

315

316

Figure 6. The attitude of intellectual humility

317

318

319

320

321

322

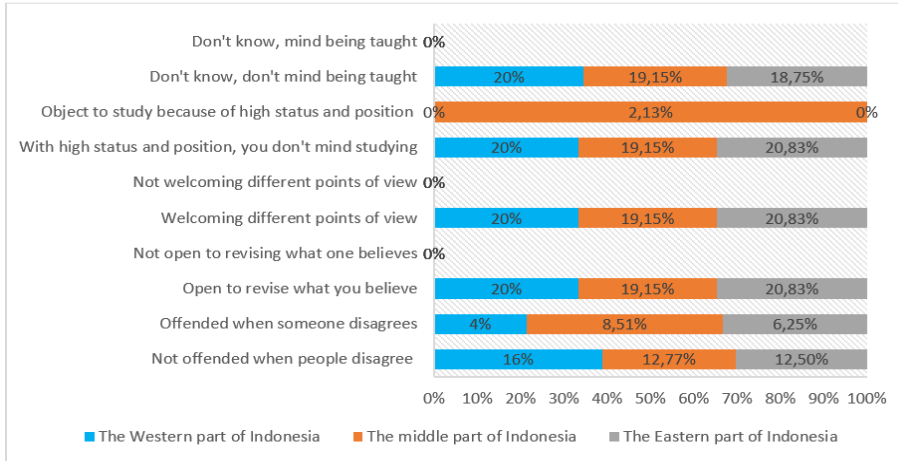

323

324

325

326

327

328 In Figure 6, Muslim youth informants have several variants of attitudes towards different
329 views, seen from; western Indonesian informants are motivated to learn if they do not
330 understand (20%), do not mind being taught (20%), welcome new views (20%), are open to
331 revising their views (20%) are offended when someone disagrees (4%), and are not offended
332 by people who disagree (16%). In this aspect, all informants do not mind being given
333 information, taught, and learning from others, as well as welcoming new views even though
334 they are different. It can also be seen in the readiness of all informants to revise their views if
335 they are wrong, which indicates that young people's intellectual humility is high and stable. It
336 is not much different from the informants in the central and eastern parts.

337

338 These results are relevant to several findings on humility and religiosity regarding religious
339 tolerance (Hook et al., 2017; Krumrei-Mancuso, 2018; Leary et al., 2017; Rodriguez et al.,
340 2017; Zhang et al., 2018). From these results, it can be concluded that there is a successful
341 application of the concept of religious moderation (Muhtifah et al., 2021). Thus, intellectual
342 humility is easier to form and strengthens tolerance (Church & Samuelson, 2016; Leary et al.,
343 2017). It is what can be offered because, from the research results, the potential for young
344 people to be exposed to radicalism is also quite high (Nafi'a et al., 2022). Nowadays,
345 intellectual humility in religion is tough to find, so what happens is that you feel self-righteous,
346 which makes you easy to disbelieve in others and makes it challenging to dialogue with other
347 religions. In the end, it is social learning.

348

349 **Developing a Model of Religious Moderation for Young People**

350

351 Modeling by considering the stages in the PLS-SEM analysis (Ringle, 2015). The first step
352 is CFA analysis with the Smart PLS program, consisting of several stages: Convergent
353 Validity, Discriminant Validity, and Composite Reliability. The results of the PLS analysis can
354 be used to test the research hypothesis if all indicators in the PLS model have met the
355 requirements of convergent validity, discriminant validity, and composite reliability. The
356 estimation results of the PLS model with algorithmic techniques can be seen in the following
357 figure:

358

359
360

366
367
368
369
370
371
372
373
374

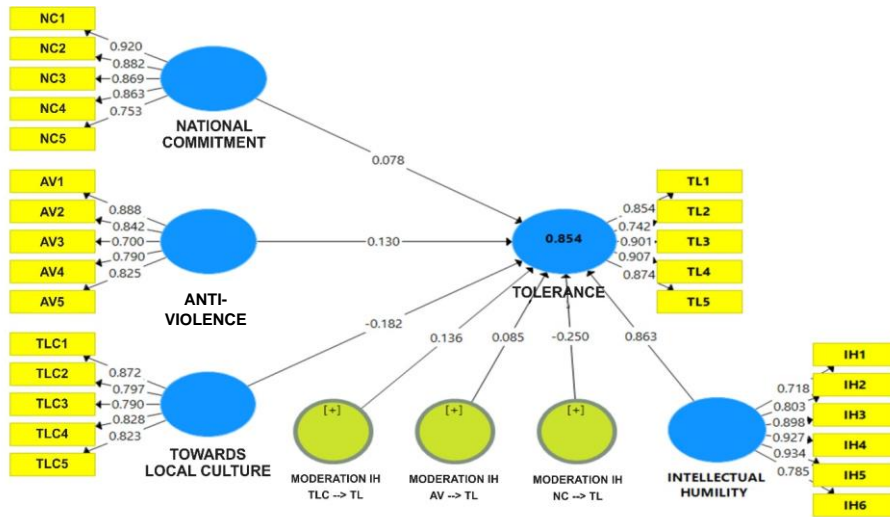

Figure 4.5 Estimation Results of the PLS Algorithm Model

375 **In the second step**, the researcher conducted a convergent validity test by looking at
376 the loading factor value of each indicator on the construct. Because this is confirmatory, the
377 limit for the loading factor used is 0.7. The loading factor value can be seen in the following
378 table:

379

380

Table 1. Loading Factor Value on Convergent Validity Test

Variable	Indicator	Loading Factor	Cut Value	Convergent Validity
National Commitment	NC-1	0.920	0.7	valid
	NC-2	0.882	0.7	valid
	NC-3	0.869	0.7	valid
	NC-4	0.863	0.7	valid
	NC-5	0.753	0.7	valid
Acommodation Toward Local Culture	TLC-1	0.872	0.7	valid
	TLC-2	0.797	0.7	valid
	TLC-3	0.790	0.7	valid
	TLC-4	0.828	0.7	valid
	TLC-5	0.823	0.7	valid
Anti Violence	AV-1	0.888	0.7	valid
	AV-2	0.842	0.7	valid
	AV-3	0.700	0.7	valid
	AV-4	0.790	0.7	valid
	AV-5	0.825	0.7	valid
Intellectual Humality	IH-1	0.718	0.7	valid
	IH-2	0.803	0.7	valid
	IH-3	0.898	0.7	valid
	IH-4	0.927	0.7	valid
	IH-5	0.934	0.7	valid
	IH-6	0.785	0.7	valid
Tolerance	TL-1	0.854	0.7	valid
	TL-2	0.742	0.7	valid
	TL-3	0.901	0.7	valid
	TL-4	0.907	0.7	valid
	TL-5	0.874	0.7	valid

381 Source: processed data (2022)

382

383 Based on the analysis in the table above, the results show that all indicators have a loading
384 factor value > 0.7 , which means that all indicators can be used to measure the construct; no
385 indicators must be excluded because all indicators have met the validity criteria required. In
386 addition to looking at the loading factor value of each indicator, convergent validity must also
387 be assessed from the AVE value of each construct; all constructs in the PLS model are declared
388 to have met convergent validity if the AVE value of each construct is > 0.5 . The complete AVE
389 value of each construct can be seen in the following table:

390

391

Table 4.1 Construct AVE Value

Construct	Average Variance Extracted (AVE)
ABL	0,676
AK	0,659
IH	0,719
KK	0,739
MOD_ABL	1,000
MOD_AK	1,000
MOD_KK	1,000
TL	0,736

392 Source: processed data (2022)

393

394 Based on the results of the PLS analysis in table 4.9 above, after invalid indicators were
395 removed from the model, all indicators were valid in measuring the construct. Then, assessed
396 from the AVE value, all constructs also had an AVE value exceeding 0.5, which means that all
397 construct indicators have met the required convergent validity criteria. The analysis stage is
398 continued at the discriminant validity test stage.

399

400 **The third step**, discriminant validity, is carried out to ensure that each concept of each
401 latent variable is different from the other variables. The model has good discriminant validity
402 if the AVE square value of each exogenous construct exceeds the correlation between the
403 construct and other constructs. The results of the discriminant validity test are obtained as
404 follows:

405

406

407

408

409

410

411 Table 4.2 Discriminant Validity according to the Fornell Larcker Test

	ABL	AK	IH	KK	MOD_AB	MOD_A	MOD_K	\sqrt{AVE}
					L	K	K	
ABL	0.822							0.822
AK	0.882	0.812						0.812
IH	0.931	0.904	0.848					0.848
KK	0.879	0.888	0.882	0.859				0.859
MOD_AB	-	-	-	-	1.000			1.000
L	0.794	0.812	0.735	0.781				
MOD_AK	-	-	-	-	0.984	1.000		1.000
	0.801	0.814	0.725	0.798				
MOD_KK	-	-	-	-	0.986	0.989	1.000	1.000
	0.786	0.813	0.725	0.781				
TL	0.842	0.862	0.915	0.834	-0.706	-0.701	-0.709	0.858

412 Source: processed data (2022)

413

414 Based on the results of the discriminant validity test in the table above, it is found that the
415 square root value of the AVE of all constructs consistently exceeds the correlation coefficient
416 of the construct with other constructs. So it can be concluded that all constructs in this PLS
417 model have met the required discriminant validity.

418

419 In addition to using the Fornell-Larcker method, discriminant validity can be seen from
420 the cross-loading value of each indicator to the construct. The indicator is declared to meet the
421 discriminant validity criteria if the cross-loading indicator to the construct is higher than the
422 cross-loading indicator value to other constructs.

423

424

Table 4.3 Discriminant Validity according to Cross Loading value

	ABL	AK	IH	KK	TL
ABL1	0,872	0,871	0,852	0,803	0,719
ABL2	0,797	0,650	0,652	0,607	0,584
ABL3	0,790	0,650	0,712	0,647	0,663
ABL4	0,828	0,718	0,781	0,847	0,694
ABL5	0,823	0,722	0,808	0,693	0,777
AK1	0,794	0,888	0,777	0,831	0,722
AK2	0,698	0,842	0,703	0,716	0,674
AK3	0,524	0,700	0,539	0,605	0,538
AK4	0,616	0,790	0,702	0,620	0,682
AK5	0,881	0,825	0,887	0,798	0,834
IH1	0,616	0,702	0,718	0,646	0,725
IH2	0,678	0,622	0,803	0,674	0,684
IH3	0,861	0,802	0,898	0,764	0,871
IH4	0,911	0,897	0,927	0,878	0,808
IH5	0,917	0,878	0,934	0,859	0,826
IH6	0,714	0,663	0,785	0,641	0,719
KK1	0,898	0,887	0,900	0,920	0,812
KK2	0,719	0,743	0,723	0,882	0,700
KK3	0,760	0,788	0,748	0,869	0,790
KK4	0,769	0,739	0,756	0,863	0,709
KK5	0,590	0,624	0,637	0,753	0,523
TL1	0,725	0,773	0,784	0,717	0,854
TL2	0,588	0,718	0,652	0,666	0,742
TL3	0,717	0,715	0,805	0,710	0,901
TL4	0,778	0,779	0,821	0,813	0,907
TL5	0,785	0,718	0,849	0,668	0,874

425

426

427 The results of the two discriminant validity tests show that the outer PLS model has met
428 the required discriminant validity criteria. Based on the results of the discriminant validity test
429 in table 4.11 above, it can be seen that all indicators have the highest indicators in their
430 constructs, not in other constructs, so it can be stated that all indicators have met the
431 requirements of discriminant validity. For example, the TL5 indicator has a cross-loading of
432 0.874 to the construct (TL). , while for the other constructs, the cross loading of TL5 is lower
433 than 0.874, which is 0.785 for the ABL construct, 0.718 for the AK, 0.849 for the IH, and 0.668
434 for the KK so that it can be stated that the discriminant validity of the TL5 is fulfilled.

435

436 **The fourth step** is to carry out construct reliability, which can be assessed from
437 Cronbach's Alpha value and the Composite Reliability value of each construct. The
438 recommended value of composite reliability and Cronbach's alpha is more than 0.7. However,
439 in development research, because the limit of the loading factor used is low (0.5), the value of
440 composite reliability and low Cronbach alpha are still acceptable as long as the requirements
441 for convergent validity and validity are met. Discriminant has been met.

442

443

Table 4.5. Composite Reliability

	Cronbach's Alpha	Composite Reliability
ABL	0,880	0,913
AK	0,869	0,906
IH	0,920	0,938
KK	0,911	0,934
MOD_ABL	1,000	1,000
MOD_AK	1,000	1,000
MOD_KK	1,000	1,000
TL	0,909	0,933

444 Source: processed data (2022)

445

446 Based on the analysis results in table 4.12 above, the composite reliability value of all
447 constructs has also exceeded 0.7. It indicates that all constructs have met the required
448 reliability, so it can be concluded that all constructs are reliable, while based on Cronbach's
449 alpha value, the performance is still below 0.7. It can be ignored. The performance construct
450 can still be considered reliable because the reliability measurement using the composite
451 reliability value is considered better than the reliability measurement using Cronbach's alpha.
452 With steps taken systematically, the preparation of the model has met the requirements so that
453 it can be continued with model testing.

454

455 Relying on this research model, preparing religious moderation education for young
456 people is essential by combining various approaches, including strengthening intellectual
457 humility, which will impact tolerance. The alternative is an integrative youth religious
458 moderation intervention, namely by combining psychological and counter-ideological support
459 programs, increasing critical, open, and reflective thinking skills (Milla et al., 2019; Milla &
460 Umam, 2019), open-mindedness as one of the intellectual humility abilities (A. Kruglanski et
461 al., 2018), psychological support through identity strengthening and counselling (Bouzar &
462 Martin, 2016), and an emphasis on cognitive complexity. In other research, young Indonesians
463 agree with tolerance as much as 93%; they view intolerance as a terrible value (Pandey, 2020).
464 In future research, these aspects will be considered to test the model of religious moderation in
465 youth.

466

467 **Conclusion**

468

469 This study concludes that intellectual humility is needed to mediate religious moderation,
470 which consists of national commitment, anti-violence, and accommodation of local culture
471 toward youth tolerance. From the coding of the data, it is found that intellectual humanity
472 attitudes mediate anti-violence attitudes towards groups and communities; anti-violence
473 attitudes towards groups encourage accommodative attitudes towards the local culture and
474 impact tolerance. In the aspect of national commitment that strengthens tolerance with
475 mediation from intellectual humility. With this finding, the religious moderation program must
476 consider the integration of all disciplines in developing a model of religious moderation that is

477 relevant to the needs of dynamic youth. The model of religious moderation has met the
478 requirements so that it can be continued for testing.

479

480 Theoretically and practically, this research contributes to the development of a model of
481 religious moderation which is currently only dominated by the approach of faith and belief in
482 the teachings of the scriptures. The religious attitudes of young people must be moderated with
483 various instruments according to their unique and unique needs amid the rapid development of
484 digitalization.

REVIEWER INSTRUCTIONS

Take into account

CONFIDENTIALITY

Do not share the contents of this manuscript. Ensure the confidentiality of the peer review process and the proprietary rights of the authors.

CONFLICT OF INTEREST

Disclose the nature of the conflict of interest to the Editor, and decline the review request if a conflict of interest is present.

AUTHENTICITY OR INTEGRITY

Inform the Editor if you have questions about the authenticity or integrity of the reported research.

TIMEFRAME

Keep to the timeframe set out by the Editor. Ensuring a timely, productive peer-review process aids in shaping the credibility and reputation of our journal.

CRITICISM OF AUTHORS

Personal or malicious criticism of the author is not appropriate or acceptable.

YOUR REVIEW REPORT

Explain and support your judgements. Ensure that any statement, observation, derivation or argument made is accompanied by relevant details from the manuscript, and where appropriate a relevant citation. Judge the quality of the manuscript, its experimental and theoretical work, its interpretations and its exposition objectively.

CONTENT

Consider this manuscript without bias, judging it on its merits without regard to the inferred race, religion, nationality, sex or seniority of the authors.

7 **Youth Religious Moderation Model and Tolerance Strengthening Through Intellectual** 8 **Humility**

9 **Abstract**

10 Religious moderation is a crucial issue, along with religious and cultural values that develop in
11 society. The success of religious moderation will significantly determine the tolerance attitude
12 of millennial Muslim youth mediated by intellectuals' humility. This study aims to identify and
13 design a model of religious moderation on tolerance by mediating intellectual humility. The
14 research method uses mixed methods, data analysis uses Nvivo 12 plus to compile variable
15 nominations, and SEM PLS creates research models. There were 350 Indonesian youth
16 informants using interviews and focus group discussions. The results show that religious
17 moderation in youth, including national commitment, anti-violence, and acceptance of local
18 culture, can strengthen tolerance mediated by intellectual humility. The tolerance attitude
19 shows high and stable data and confirms the strengthening of religious moderation in young
20 people.

21 **Contribution:** This research has essential assistance in implementing religious moderation for
22 young people, which is currently the most prevalent issue in Indonesia. The world needs a
23 moderate religious attitude to become a middle ground for various religious and cultural
24 differences among people globally.

25
26 **Keywords:** Youth, Religious, Moderation, Tolerance, Intellectual Humility

27

28 Introduction

29

30 In various parts of the world, the threat of conflict triggered by differences in ethnicity,
31 ethnicity, race, political affiliation, and religious sentiments is still prone to occur, leading to
32 the dominance of the majority over minorities (Rogers, 2018; Syarif, 2019; Yazdani, 2020).
33 Extreme religious attitudes and self-righteousness also cause this condition. Some countries
34 have problems with inter-religious relations; for example, the feud between Muslims and
35 Buddhists have occurred in Sri Lanka and Myanmar. Conflicts between Hindu and Muslim
36 groups in India arose as a result of mutual contempt between religious communities
37 (Frydenlund, 2015; Singh, 2018). This situation forces humanity into a situation of conflict and
38 even war that, which is exhausting. Several studies have found the role of faith-based
39 organizations and religious leaders in promoting peaceful conflict resolution through
40 mediation. Mediation can be done by increasing the meeting point between religious and
41 cultural values. This process is called moderation, choosing a middle way between conflict
42 resolution and peace and strengthening religious relations (Pajarianto, 2022; Pajarianto,
43 Pribadi, Sari, et al., 2022).

44

45 Indonesia has a critical demographic for conflict between adherents of one religion and
46 adherents of another religion due to its diversity of religions. Islam is the majority religion,
47 Catholicism, Protestantism, Hinduism, Buddhism, Confucianism, and beliefs that have lived
48 for centuries in the archipelago, not to mention hundreds of tribes with different languages.
49 Learning from conflicts that take advantage of religious sentiments, such as in Poso, Maluku,
50 Kalimantan, and other areas. Nowadays, tolerance is encouraged by the government and civil
51 society. A survey from Political Research and Consulting (PRC), conducted by the Indonesian
52 Political Parameter (PPI) in 2022, showed that there is an increase in the value of the situation
53 of ethnic tolerance in Indonesia based on the assessment of these figures, which is 7.32, or in
54 the excellent category. Likewise, the situation of religious tolerance has a value of 6.85. Then
55 the security situation gets a score of 6.83 and the situation of the civil role (6.57), the situation
56 of human rights enforcement (6.05), and the economic situation (6.01) (Purwati et al., 2022).

57

58 Indonesia can be a model for managing potential religious and ethnic conflicts with
59 tolerant religious understanding, attitudes, and behaviour so that moderation becomes a unique
60 feature and process (Zakaria, 2020). As a result, religious moderation has become a national

Commented [A1]: What is your reason for stating this?

Commented [A2]: What is your basis for stating that there is a conflict of religious sentiment in the area? Show some references or data that corroborate the statement

Commented [A3]: This statement contrasts with the statement in the first sentence in the second paragraph

61 policy as a solution to prevent intolerance and radicalism (Subchi et al., 2022). Moderation is
62 the essence of Islam, which is very relevant in the context of diversity in all aspects, religion,
63 customs, ethnicity, and the nation itself (Dawing, 2017). Religious moderation has at least three
64 dimensions, namely: 1) national commitment; 2) non-violence; and 3) accommodating to local
65 culture. These three indicators can be used to identify how strong the religious moderation
66 practised by millennials in Indonesia is and how much vulnerability they have (Fahri & Zainuri,
67 2019). Millennials are defined as those born between 1980 and 1995 (Foot & Stoffman, 1996).
68 David Foot is a demographer who based his opinion on them as the "Baby Boom Echo."
69 Millennials are said to have a common location in historical time, shaped by historical events
70 and experiences at that time (Gilleard, 2004). This conceptualization of "generation" is rooted
71 in Mannheim's theory or the sociology of generation, in which members of the same generation
72 share more than the same year of birth. As a result, the environment in which Millennials grew
73 up during their formative years influences their values, attitudes, and behaviour (Mannheim,
74 1984).

75
76 Several researchers have explored the issue of religious moderation, but in general, it is
77 still in the literature review and published in national journals. *First*, it was conducted by
78 Nuraliah Ali to measure religious moderation descriptively with limited indicators. More
79 indicators can be formulated to determine a person's perspective, attitudes, and religious
80 methods (Ali, 2020), or consider other variables as mediation. *Second*, according to Dodego,
81 religious moderation is needed by the Indonesian people because it is simple, and not rigid, and
82 promotes harmony (Dodego & Witro, 2020). *Third*, the study in Australia by Markus also
83 describes the potential discrimination of millennial youth, but they make good use of
84 opportunities and cultural diversity to understand differences (Markus, 2017). *Fourth*, Subchi
85 found that religiosity influences religious moderation, which is different from other findings
86 about the adverse effects of religiosity, especially the ritual dimension, on religious tolerance,
87 internally and externally (Subchi et al., 2022). *Fifth*, Wolhuter suggests developing a
88 coexistence model of worldviews and life (Wolhuter et al., 2014). This model evaluates
89 inclusivism, universalism, and pluralism, which have shortcomings.

90
91 Religious moderation is an essential issue in Indonesia's National Medium-Term
92 Development Plan. It is one of the crucial agendas in countering various acts of intolerance that
93 can occur in the largest multicultural country in the world, like Indonesia. From previous

Commented [A4]: Numbering is written in italics

Commented [A5]: Numbering is written in italics

Commented [A6]: Numbering is written in italics

Commented [A7]: Numbering is written in italics

Commented [A8]: Numbering is written in italics

94 research (research gap) and the development of religious moderation discourse, researchers
95 developed a novelty by including intellectual humility to be considered as a mediation of
96 religious moderation with tolerance. Several recent studies have more specifically found the
97 effect of intellectual humility on religious tolerance. Humility and tolerance are different but
98 related concepts (Krumrei-Mancuso & Rouse, 2016). Openness and flexibility in thinking also
99 make it easier for individuals to see from the perspective of others; thus, intellectual humility
100 is more easily formed and strengthens tolerance (Church & Samuelson, 2016; Leary et al.,
101 2017). This study aims to identify indicators of the religious moderation model to strengthen
102 tolerance attitudes with intellectual humility mediation and to design a religious moderation
103 model to strengthen tolerance attitudes with intellectual humility mediation.

104

105 **Methods**

106

107 In general, this research will carry out the process of identifying and designing the model
108 (Thiagarajan et al., 1974). This study is qualitative-quantitative descriptive research with an
109 educational and religious approach by collecting various themes, cultural focuses, values, and
110 symbols in each domain (Spradley, 2016). The research model is an unbalanced mixed
111 combination model or concurrent embedded. The Concurrent embedded method is a research
112 method that combines qualitative and quantitative research methods by mixing both methods
113 unbalanced but independently to answer similar problem formulations (Sugiyono, 2017).

114

115 The data source in this study is the subject from which the data can be obtained (Arikunto,
116 2013; Moleong, 2007). Informants were identified using snowball sampling, and as many as
117 350 people were selected proportionally. In details, there are 100 students from the western
118 part of Indonesia, 150 students from the center, and 100 from the eastern part. Focus Group
119 Discussions (FGD) and interviews were used to collect data.

120

121 Data analysis was carried out using qualitative software, in this case, nVivo 12 plus, as a
122 computer assistance programme developed by QSR International to process data through
123 highlighting, writing notes, and linking ideas (Brandão, 2015; Edwards-Jones, 2014;
124 Göransson et al., 2007; Humble & Radina, 2019; Jackson, 2021). The stages of data analysis

Commented [A9]: It is necessary to explain the reason why the author takes the concept of intellectual humility and religious moderation as the indicators in religious tolerance of the youth generation

Commented [A10]: ?

125 consist of; (1) collecting data, (2) organizing data, (3) making memos, (4) coding data, (5)
126 analyzing data, and (6) displaying data (Woolf & Silver, 2018).

127

128 To perform the modeling consists of (1) drawing a path diagram according to the research
129 model framework; (2) testing the outer model to assess the validity and reliability of indicators
130 in measuring the variables (constructs); (3) assessing the goodness of fit model to ensure that
131 the processed data fits the estimated model so that the sample used can provide an overview of
132 the actual population condition; and (4) testing the inner model, which is the stage of testing
133 the influence between variables as a tool to test research hypotheses (Ringle, 2015).

134

135 **Findings and Discussion**

136

137 This study's findings identify young Muslims' views towards tolerance, which are taken
138 from the religious perspective of the Indonesian people who prioritise moderate attitudes. The
139 researcher identifies the community's views, especially young Indonesians, towards tolerance.
140 In the end, this view is taken as the principle and value of the Indonesian people in their attitude,
141 especially towards the value of plurality.

142

143 **Youth National Commitment**

144

145 National commitment is an attachment to full responsibility to be loyal and grow self-
146 awareness as an Indonesian nation. Without a consistent national commitment from citizens,
147 the state cannot stand upright and achieve the aspirations and hopes of its people. National
148 commitment is related to the attitude of young people towards the symbols of the state and the
149 basic consensus, that is, the agreement of the entire Indonesian nation. Youth's national
150 commitment can be seen in Figure 2 below:

151

Commented [A11]: ?

152

Figure 2. National Commitment

153

154

155

156

157

158

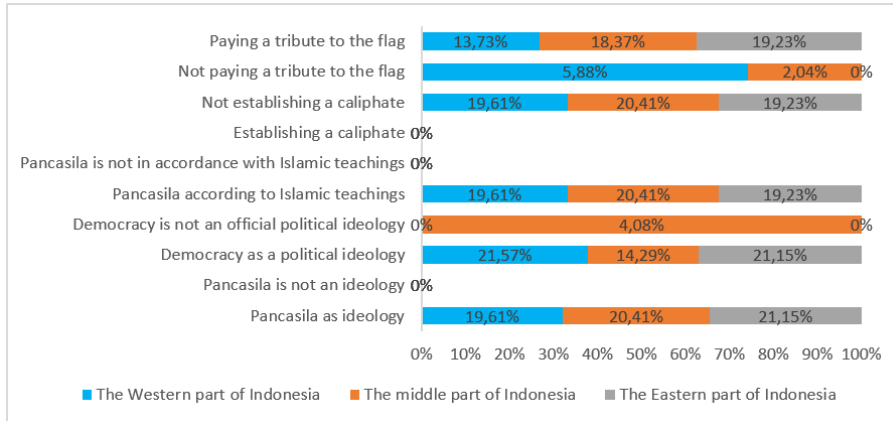

159

160

161

162

163

164 In Figure 2, the aspect of national commitment from students from the western, central,
165 and eastern parts of Indonesia is relatively the same, but the differences are not too significant.
166 However, there are some aspects to this finding. All young people do not agree with the
167 caliphate state because it contradicts the state ideology, namely Pancasila. Khilafah is one of
168 the most massive and crucial issues in Indonesia. One of the mass organisations carrying the
169 caliphate issue is Hizb ut-Tahrir, which claims that they are here to fight what they claim is a
170 secular-capitalist-nationalist system and considers Muslims who believe in democracy to be
171 kufr, infidels, or even apostates, and those who have embraced democracy. Deviate from the
172 faith (Valentine, 2010). The government dissolved HTI based on Government Regulation in
173 Law Number (Perppu) 2 of 2017, namely Law Number 17 of 2013 concerning Civil Society
174 Organizations (CSO). Through this Perppu, the government has the authority to prohibit
175 organisations that “spread ideological or philosophical doctrines that violate Pancasila and the
176 1945 Constitution”. Previous findings corroborate that as many as 81.5% of millennial youth
177 support and commit to the Unitary State of the Republic of Indonesia (IDN Research Institute,
178 2019). Meanwhile, all informants (100%) of young people also considered Pancasila to follow
179 Islamic teachings, and all informants recognised Pancasila as the state ideology.

180

181 **Anti-Violence**

182

183 Anti-violence is one of the pillars of religious moderation that young people must possess.
184 Even now, non-violent education is developing, which can also be called peaceful education,
185 and is done wholeheartedly to educate, not teach. In figure 3, young people's attitudes towards
186 non-violence are shown.

193

194

195

196

197

198

199

200

201 In the picture above, young people from western, central, and eastern Indonesia generally
202 show an anti-violence attitude. They will not mediate conflict (4%) if it is on a scale that the
203 local government can handle. If the conflict is widespread, 20% of youth informants from
204 Eastern Indonesia will become mediators in the event of a conflict. 2% of informants are willing
205 to commit acts of violence. They will do so if the religion they believe in is disturbed from the
206 outside. All the informants indicated that they would not do any damage even though there are
207 illegal places of worship and would leave it to the government to complete the legality. While
208 attitudes towards violent behaviour are often associated with religion, they disagree. Religion
209 does not teach violence against followers of other religions or houses of worship.

210

211 The data explains that young Indonesians have shown a positive attitude toward fighting
212 violence in the name of religion. Violence deviates from behavioural norms, passion, intensity,
213 or attitude polarity (A. W. Kruglanski & Orehek, 2012). In this case, violent extremism can be
214 explained as firmness of belief, willingness to defend a position, firmness of opinion, and using
215 violent means. They tend to refuse and position themselves as mediators in every conflict.

216

217 **Youth Attitudes Towards Local Culture**

218

219 Local cultural diversity is a social phenomenon that can shape each region's cultural
220 character and image. Every society has a local culture inherent in the community, including
221 young people. Local culture arises when residents of an area already have the same mindset
222 and social life, so it becomes a habit that distinguishes them from other residents.

223

Abstract: 172 words; Main Text: 4596 words; References: 53; Tables: 5; Figures: 6

224 **Figure 4. The attitude of accommodation toward local culture**

236 In Figure 4, young people's answers to the culture generally show the same character.
237 There are indicators of a strengthened attitude of respect for local culture, which is the
238 fundamental value of their lives. Young people from eastern Indonesia showed a higher attitude
239 towards houses of worship with cultural themes (20%). Furthermore, regarding tolerance of
240 various cultures that grow in their environment, young people from eastern Indonesia also show
241 a higher attitude, as much as 24.44%. It is because, in eastern Indonesia, various local cultures
242 are still relatively well preserved and live in a pluralistic socio-religious situation. Likewise,
243 for respect for culture, young people from eastern Indonesia, with 22.22%.

244
245 Local culture, in several studies, can be used as a glue for differences between religions
246 and become unique in Indonesia (Pajarianto, Pribadi, & Sari, 2022; Pajarianto, Pribadi, Sari, et
247 al., 2022). Moderate people tend to be more accepting of local traditions and culture in their
248 religious behaviour as long as they do not conflict with the central teachings of religion.
249 Indonesian society is rich in local culture that adapts and manages resources for mutual
250 prosperity (Pesurnay, 2018), often associated with myths even though it grows dynamically
251 following human innovation and creativity (Effendi, 2019). It is essential to revitalise local
252 culture by strengthening tolerance for various Indonesian treasures.

253

254 **Youth Tolerance**

255

256 Young people today live in a very fast-paced world, especially with the development of
257 technology and digital information. Apart from having negative potential, this development
258 has a positive impact on their perspective on humans or different groups.

259

260

261

Figure 5. Youth Tolerance

262

263

264

265

266

267

268

269

270

271

272 The informants' answers on the tolerance attitudes of young people show that there are
273 different perceptions and answers about tolerance. Informants from western Indonesia
274 indicated that; they believe that people from different sects/schools can become good citizens
275 (9.80%) while not sure about the value (9.80). Do not believe people of different religions to
276 be good citizens (7.84%); believe people of different religions to be good citizens (11.76%). It
277 does not support the construction of places of worship (1.96%) but supports the construction
278 of places of worship (17.65%). Other schools and organisations make me uncomfortable
279 (1.96%); other schools and organisations make me comfortable (17.65%). The participants also
280 do not feel comfortable with other groups (0%) and feel comfortable with other religious
281 groups (21.57%).

282
283 Central Indonesian informants indicate that; they do not believe that people from different
284 sects/schools can become good citizens (12.24%) and believe in values (18.16%). They do not
285 believe people of different religions to be good citizens (10.20%). They do not believe people
286 of different religions to be good citizens (10.20%). It does not support the construction of places
287 of worship (6.12%) but supports the construction of places of worship (14.24%). They are not
288 comfortable with other schools and organisations (4.08%) and feel comfortable with other
289 schools and organisations (16.33%). Do not feel comfortable with other groups (4%) and feel
290 comfortable with other religious groups (14.29%).

291
292 Eastern Indonesia informants indicate that; they do not believe that people from different
293 sects/schools can become good citizens (4.08%) and believe in values (16.33%). They do not
294 believe people of different religions to be good citizens (0%); they believe people of different
295 religions to be good citizens (20.41%). It does not support the construction of places of worship
296 (4.08%) but supports the construction of places of worship (14.29%). Do not feel comfortable
297 with other schools and organisations (14.29%) or with other schools and organisations
298 (16.33%). Do not feel comfortable with other groups (12.24%) and feel comfortable with other
299 religious groups (8.16%).

300
301 The attitude of not believing people of different religions are not good citizens because
302 certain sects or groups are not in line with the Indonesian government system, thus judging that
303 the views of these groups are limited and only seeing them from one religious perspective.

304 Whereas religions worldwide have the resources to respect religious freedom (Kärkkäinen,
305 2017), and have universal views whose values can be accepted by all religious adherents.

306

307 **The Attitude of Young People's Intellectual Humanity**

308

309 Intellectual humility (intellectually) is often considered one factor in how someone learns
310 something new because humility involves acknowledging one's limitations, including
311 ignorance of something. Young people must have this attitude as social skills are needed in the
312 field of work or to stem the flow of radicalism that can arise from an attitude of self-
313 righteousness and claiming that others are wrong. Thus, this attitude is very relevant as a
314 mainstream viewpoint among young people.

315

Commented [A12]: Intellectual humanity or humility? The study is focused on the intellectual humility variable. Don't bring up new variables

316

Figure 6. The attitude of intellectual humility

317

318

319

320

321

322

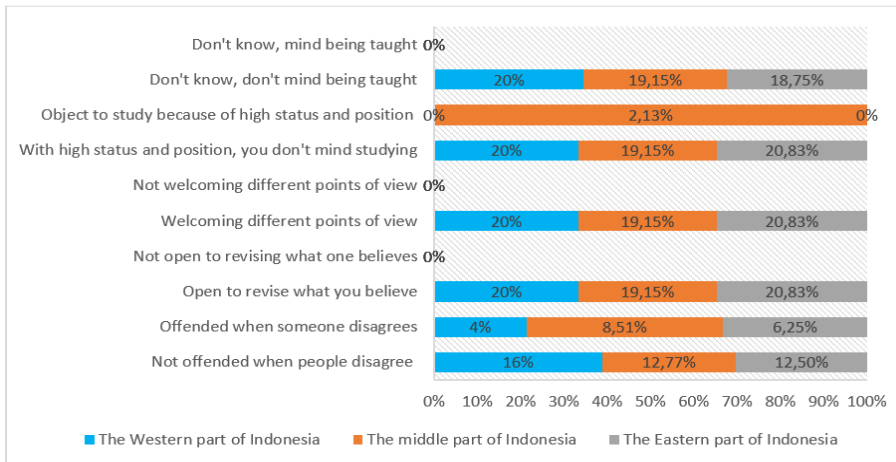

323

324

325

326

327

328 In Figure 6, Muslim youth informants have several variants of attitudes towards different
329 views, seen from; western Indonesian informants are motivated to learn if they do not
330 understand (20%), do not mind being taught (20%), welcome new views (20%), are open to
331 revising their views (20%) are offended when someone disagrees (4%), and are not offended
332 by people who disagree (16%). In this aspect, all informants do not mind being given
333 information, taught, and learning from others, as well as welcoming new views even though
334 they are different. It can also be seen in the readiness of all informants to revise their views if
335 they are wrong, which indicates that young people's intellectual humility is high and stable. It
336 is not much different from the informants in the central and eastern parts.

337

338 These results are relevant to several findings on humility and religiosity regarding religious
339 tolerance (Hook et al., 2017; Krumrei-Mancuso, 2018; Leary et al., 2017; Rodriguez et al.,
340 2017; Zhang et al., 2018). From these results, it can be concluded that there is a successful
341 application of the concept of religious moderation (Muhtifah et al., 2021). Thus, intellectual
342 humility is easier to form and strengthens tolerance (Church & Samuelson, 2016; Leary et al.,
343 2017). It is what can be offered because, from the research results, the potential for young
344 people to be exposed to radicalism is also quite high (Nafi'a et al., 2022). Nowadays,
345 intellectual humility in religion is tough to find, so what happens is that you feel self-righteous,
346 which makes you easy to disbelieve in others and makes it challenging to dialogue with other
347 religions. In the end, it is social learning.

348

349 **Developing a Model of Religious Moderation for Young People**

350

351 Modeling by considering the stages in the PLS-SEM analysis (Ringle, 2015). The first step
352 is CFA analysis with the Smart PLS program, consisting of several stages: Convergent
353 Validity, Discriminant Validity, and Composite Reliability. The results of the PLS analysis can
354 be used to test the research hypothesis if all indicators in the PLS model have met the
355 requirements of convergent validity, discriminant validity, and composite reliability. The
356 estimation results of the PLS model with algorithmic techniques can be seen in the following
357 figure:

358

369
370
371
372
373
374

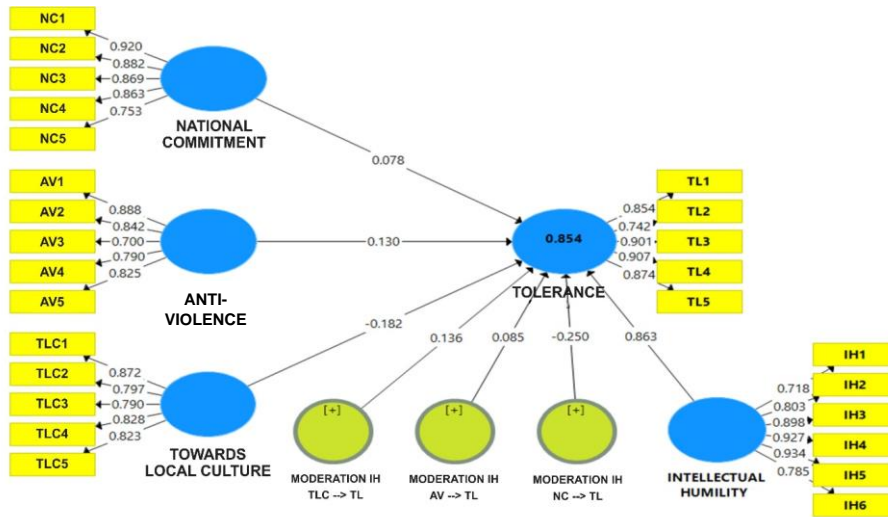

Figure 4.5 Estimation Results of the PLS Algorithm Model

375 **In the second step**, the researcher conducted a convergent validity test by looking at
376 the loading factor value of each indicator on the construct. Because this is confirmatory, the
377 limit for the loading factor used is 0.7. The loading factor value can be seen in the following
378 table:

379

380

Table 1. Loading Factor Value on Convergent Validity Test

Variable	Indicator	Loading Factor	Cut Value	Convergent Validity
National Commitment	NC-1	0.920	0.7	valid
	NC-2	0.882	0.7	valid
	NC-3	0.869	0.7	valid
	NC-4	0.863	0.7	valid
	NC-5	0.753	0.7	valid
Toward Local Culture	TLC-1	0.872	0.7	valid
	TLC-2	0.797	0.7	valid
	TLC-3	0.790	0.7	valid
	TLC-4	0.828	0.7	valid
	TLC-5	0.823	0.7	valid
Anti-Violence	AV-1	0.888	0.7	valid
	AV-2	0.842	0.7	valid
	AV-3	0.700	0.7	valid
	AV-4	0.790	0.7	valid
	AV-5	0.825	0.7	valid
Intellectual Humility	IH-1	0.718	0.7	valid
	IH-2	0.803	0.7	valid
	IH-3	0.898	0.7	valid
	IH-4	0.927	0.7	valid
	IH-5	0.934	0.7	valid
	IH-6	0.785	0.7	valid
Tolerance	TL-1	0.854	0.7	valid
	TL-2	0.742	0.7	valid
	TL-3	0.901	0.7	valid
	TL-4	0.907	0.7	valid
	TL-5	0.874	0.7	valid

Commented [A13]: ?

Commented [A14]: Humality or humility?

381 Source: processed data (2022)

382

383 Based on the analysis in the table above, the results show that all indicators have a loading
384 factor value > 0.7 , which means that all indicators can be used to measure the construct; no
385 indicators must be excluded because all indicators have met the validity criteria required. In
386 addition to looking at the loading factor value of each indicator, convergent validity must also
387 be assessed from the AVE value of each construct; all constructs in the PLS model are declared
388 to have met convergent validity if the AVE value of each construct is > 0.5 . The complete AVE
389 value of each construct can be seen in the following table:

390

391

Table 4.1 Construct AVE Value

Construct	Average Variance Extracted (AVE)
ABL	0,676
AK	0,659
IH	0,719
KK	0,739
MOD_ABL	1,000
MOD_AK	1,000
MOD_KK	1,000
TL	0,736

392 Source: processed data (2022)

393

394 Based on the results of the PLS analysis in table 4.9 above, after invalid indicators were
395 removed from the model, all indicators were valid in measuring the construct. Then, assessed
396 from the AVE value, all constructs also had an AVE value exceeding 0.5, which means that all
397 construct indicators have met the required convergent validity criteria. The analysis stage is
398 continued at the discriminant validity test stage.

399

400 **The third step**, discriminant validity, is carried out to ensure that each concept of each
401 latent variable is different from the other variables. The model has good discriminant validity
402 if the AVE square value of each exogenous construct exceeds the correlation between the
403 construct and other constructs. The results of the discriminant validity test are obtained as
404 follows:

405

406

407

408

409

410

411 Table 4.2 Discriminant Validity according to the Fornell Larcker Test

	ABL	AK	IH	KK	MOD_AB	MOD_A	MOD_K	\sqrt{AVE}
					L	K	K	
ABL	0.822							0.822
AK	0.882	0.812						0.812
IH	0.931	0.904	0.848					0.848
KK	0.879	0.888	0.882	0.859				0.859
MOD_AB	-	-	-	-	1.000			1.000
L	0.794	0.812	0.735	0.781				
MOD_AK	-	-	-	-	0.984	1.000		1.000
	0.801	0.814	0.725	0.798				
MOD_KK	-	-	-	-	0.986	0.989	1.000	1.000
	0.786	0.813	0.725	0.781				
TL	0.842	0.862	0.915	0.834	-0.706	-0.701	-0.709	0.858

412 Source: processed data (2022)

413

414 Based on the results of the discriminant validity test in the table above, it is found that the
415 square root value of the AVE of all constructs consistently exceeds the correlation coefficient
416 of the construct with other constructs. So, it can be concluded that all constructs in this PLS
417 model have met the required discriminant validity.

418

419 In addition to using the Fornell-Larcker method, discriminant validity can be seen from
420 the cross-loading value of each indicator to the construct. The indicator is declared to meet the
421 discriminant validity criteria if the cross-loading indicator to the construct is higher than the
422 cross-loading indicator value to other constructs.

423

424

Table 4.3 Discriminant Validity according to Cross Loading value

	ABL	AK	IH	KK	TL
ABL1	0,872	0,871	0,852	0,803	0,719
ABL2	0,797	0,650	0,652	0,607	0,584
ABL3	0,790	0,650	0,712	0,647	0,663
ABL4	0,828	0,718	0,781	0,847	0,694
ABL5	0,823	0,722	0,808	0,693	0,777
AK1	0,794	0,888	0,777	0,831	0,722
AK2	0,698	0,842	0,703	0,716	0,674
AK3	0,524	0,700	0,539	0,605	0,538
AK4	0,616	0,790	0,702	0,620	0,682
AK5	0,881	0,825	0,887	0,798	0,834
IH1	0,616	0,702	0,718	0,646	0,725
IH2	0,678	0,622	0,803	0,674	0,684
IH3	0,861	0,802	0,898	0,764	0,871
IH4	0,911	0,897	0,927	0,878	0,808
IH5	0,917	0,878	0,934	0,859	0,826
IH6	0,714	0,663	0,785	0,641	0,719
KK1	0,898	0,887	0,900	0,920	0,812
KK2	0,719	0,743	0,723	0,882	0,700
KK3	0,760	0,788	0,748	0,869	0,790
KK4	0,769	0,739	0,756	0,863	0,709
KK5	0,590	0,624	0,637	0,753	0,523
TL1	0,725	0,773	0,784	0,717	0,854
TL2	0,588	0,718	0,652	0,666	0,742
TL3	0,717	0,715	0,805	0,710	0,901
TL4	0,778	0,779	0,821	0,813	0,907
TL5	0,785	0,718	0,849	0,668	0,874

425

426

427 The results of the two discriminant validity tests show that the outer PLS model has met
428 the required discriminant validity criteria. Based on the results of the discriminant validity test
429 in table 4.11 above, it can be seen that all indicators have the highest indicators in their
430 constructs, not in other constructs, so it can be stated that all indicators have met the
431 requirements of discriminant validity. For example, the TL5 indicator has a cross-loading of
432 0.874 to the construct (TL). , while for the other constructs, the cross loading of TL5 is lower
433 than 0.874, which is 0.785 for the ABL construct, 0.718 for the AK, 0.849 for the IH, and 0.668
434 for the KK so that it can be stated that the discriminant validity of the TL5 is fulfilled.

435

436 **The fourth step** is to carry out construct reliability, which can be assessed from
437 Cronbach's Alpha value and the Composite Reliability value of each construct. The
438 recommended value of composite reliability and Cronbach's alpha is more than 0.7. However,
439 in development research, because the limit of the loading factor used is low (0.5), the value of
440 composite reliability and low Cronbach alpha are still acceptable as long as the requirements
441 for convergent validity and validity are met. Discriminant has been met.

442

443

Table 4.5. Composite Reliability

	Cronbach's Alpha	Composite Reliability
ABL	0,880	0,913
AK	0,869	0,906
IH	0,920	0,938
KK	0,911	0,934
MOD_ABL	1,000	1,000
MOD_AK	1,000	1,000
MOD_KK	1,000	1,000
TL	0,909	0,933

444 Source: processed data (2022)

445

446 Based on the analysis results in table 4.12 above, the composite reliability value of all
447 constructs has also exceeded 0.7. It indicates that all constructs have met the required
448 reliability, so it can be concluded that all constructs are reliable, while based on Cronbach's
449 alpha value, the performance is still below 0.7. It can be ignored. The performance construct
450 can still be considered reliable because the reliability measurement using the composite
451 reliability value is considered better than the reliability measurement using Cronbach's alpha.
452 With steps taken systematically, the preparation of the model has met the requirements so that
453 it can be continued with model testing.

454

455 Relying on this research model, preparing religious moderation education for young
456 people is essential by combining various approaches, including strengthening intellectual
457 humility, which will impact tolerance. The alternative is an integrative youth religious
458 moderation intervention, namely by combining psychological and counter-ideological support
459 programs, increasing critical, open, and reflective thinking skills (Milla et al., 2019; Milla &
460 Umam, 2019), open-mindedness as one of the intellectual humility abilities (A. Kruglanski et
461 al., 2018), psychological support through identity strengthening and counselling (Bouzar &
462 Martin, 2016), and an emphasis on cognitive complexity. In other research, young Indonesians
463 agree with tolerance as much as 93%; they view intolerance as a terrible value (Pandey, 2020).
464 In future research, these aspects will be considered to test the model of religious moderation in
465 youth.

466

467 **Conclusion**

468

469 This study concludes that intellectual humility is needed to mediate religious moderation,
470 which consists of national commitment, anti-violence, and accommodation of local culture
471 toward youth tolerance. From the coding of the data, it is found that intellectual humanity
472 attitudes mediate anti-violence attitudes towards groups and communities; anti-violence
473 attitudes towards groups encourage accommodative attitudes towards the local culture and
474 impact tolerance. In the aspect of national commitment that strengthens tolerance with
475 mediation from intellectual humility. With this finding, the religious moderation program must
476 consider the integration of all disciplines in developing a model of religious moderation that is

Commented [A15]: Consistent on the intellectual humility variable

477 relevant to the needs of dynamic youth. The model of religious moderation has met the
478 requirements so that it can be continued for testing.

479

480 Theoretically and practically, this research contributes to the development of a model of
481 religious moderation which is currently only dominated by the approach of faith and belief in
482 the teachings of the scriptures. The religious attitudes of young people must be moderated with
483 various instruments according to their unique and unique needs amid the rapid development of
484 digitalization.

AUTHOR INSTRUCTIONS

Take into account

FINAL PROOF CORRECTIONS

This is your final proof of the typeset pages provided in Portable document format (PDF). We direct your attention to the instructions accompanying the proof, especially the requirement that all corrections, revisions, and additions be entered on the proof with comments and not on the word version of the manuscript. You are being asked to correct errors, not to revise the paper. Avoid moving blocks of text or making extensive content-related revision(s). Extensive alteration may require Editorial Board approval, possibly delaying publication. How to: <https://tinyurl.com/5n7795k5>

MAKE YOUR CORRECTIONS AND ANSWER QUERIES

Indicate your corrections on the PDF directly on the proofs with the *Comment* tool in Acrobat Adobe Reader. Add PDF annotations to your file. You can add text boxes and sticky notes, underline text, strikethrough content, highlight text, and more. Make sure to answer all enquiries so that your corrections are noticeable and easy to understand.

ARTICLE TITLE, AUTHORSHIP AND AFFILIATIONS

Check the title, the author names, and affiliations. Refrain from submitting without co-authors' approval. Authorship should ideally remain intact and unchanged; all author's contributions statements must acknowledge all authors' roles and participation.

TABLES

Check the table data against that in your original tables. Make sure that the data mentioned in the manuscript results match those in the tables. All columns in the table need a descriptive header to guide readers.

EQUATIONS AND UNITS OF MEASUREMENT

Check any equations and units of measurement against those in your original manuscript. Make sure special characters have not dropped out.

FIGURES AND PHOTOGRAPHS

Check to be sure that figures are entirely legible, including any small-print text. Make sure that the data mentioned in the manuscript results match that referred to in the figures. The vertical and horizontal axis needs descriptors to guide readers. Photographs need the correct source to acknowledge the place, time, and photographer - check these credentials.

ERRORS

If you find an error, look again at the lines around the error. Mistakes tend to cluster; especially redacted information will need to be reintroduced when it was removed for anonymity during peer review.

TIMEFRAME

Keep to the timeframe of the Production Coordinator. Ensuring a timely, productive proofreading process aids in shaping the credibility and reputation of our journal.

SATISFACTION

You must be completely SATISFIED with the final proof and inform the Editorial Office about your satisfaction via email or the online submission system. Upon receiving your final satisfied opinion and corrections, the Editorial Office will implement the changes and send your article for final publication.

AUTHOR'S QUERY SHEET

Author(s): Hadi Pajarianto et al.
Article title: Youth religious moderation model and tolerance strengthening through intellectual humility
Article id: HTS8196

Dear Author

The following queries have arisen during the editing of your manuscript and are identified on the proofs. Unless advised otherwise, please submit all corrections using the online Proofreading correction feature.

- ~~AQ1 Please confirm expansion of PLS SEM.~~
- ~~AQ2 Please check whether the identified heading levels are okay.~~
- ~~AQ3 Kindly indicate whether this creative is your own creation/data compilation, or whether it is being re-used from another published source. It is important that you give credit and endorsement to all third-party sources.~~
- ~~AQ4 The sentence 'Deviate from the faith' seems to be incomplete. Please provide missing words or phrases to complete it.~~
- ~~AQ5 Please check expansion of HTI, PLS SEM, CFA, AVE.~~
- ~~AQ6 Please check phrase for clarity.~~
- ~~AQ7 Please check the clarity of the sentence 'Likewise, for respect for culture . . . ?'~~
- ~~AQ8 Please provide in-text citation for Figure 4.~~
- ~~AQ9 Please check edited sentences for intended meaning.~~
- ~~AQ10 Please replace solidus with 'and', 'or' or 'and/or' throughout where relevant as per journal style.~~
- ~~AQ11 Sentence does not appear to match information in the graph, in which the 16.33% figure belongs to central rather than eastern Indonesia.~~
- ~~AQ12 The sentence 'Modelling by considering the stages in the PLS SEM analysis' seems to be incomplete. Please check.~~
- ~~AQ13 Please provide significance of bold values for Tables 2 to 5.~~
- ~~AQ14 Please provide expansions for ABL, AK, IH, KK, MOD_ABL, MOD_AK, MOD_KK, TL.~~
- ~~AQ15 Please check whether the reference Ringle 2015 okay as set.~~
- ~~AQ16 Please provide column head for Tables 3 to 5.~~
- ~~AQ17 Please check the sentence 'according to their unique and unique needs amid the rapid development of digitalization' for clarity.~~
- ~~AQ18 This sentence is incomplete. Please check.~~
- ~~AQ19 Please provide publisher name and city name for Humble & Radina (2019), IDN Research Institute (2019), Markus (2017), Moleong (2007).~~
- ~~AQ20 Please provide viewed date for Jackson (2021).~~
- ~~AQ21 Please provide editor(s) name and publisher city name for Kalhoru & Cromwell (2022).~~
- ~~AQ22 Please provide conference date and city name for Khairil (2017), Rodriguez et al. (2017), Rusyaid et al. (2022).~~
- ~~AQ23 Please provide editor(s) name, publisher name and city name for Kruglanski & Orehek (2012), Milla & Umam (2019).~~
- ~~AQ24 Please provide publisher city name for Church & Samuelson (2016), Mannheim (1984), Spradley (2016), Sugiyono (2017).~~

Youth religious moderation model and tolerance strengthening through intellectual humility

Religious moderation is a crucial issue, along with religious and cultural values that develop in society. Religious moderation's success will significantly determine millennial Muslim youth's tolerant attitudes, mediated by intellectual humility. This study aimed to identify and design a model of religious moderation on tolerance by mediating intellectual humility. The research used mixed methods; data analysis used NVivo 12 Plus to compile variable nominations; and partial least squares structural equation modelling (PLS SEM) estimates research models. There were 350 Indonesian youth informants in the study, which used interviews and focus group discussions. The results showed that religious moderation in youth, including national commitment, antiviolenace and acceptance of local culture, can strengthen tolerance, mediated by intellectual humility. The tolerant attitude shows high and stable data and confirms the strengthening of religious moderation in young people. From the identification, a model of religious moderation in youth was designed and revised, and the results have met all the requirements for modelling so that it can be continued for testing.

Contribution: This research provides essential assistance in implementing religious moderation for young people, which is currently the most prevalent issue in Indonesia. The world needs a moderate religious attitude to become a middle ground for various religious and cultural differences among people globally.

Keywords: Youth; religious; moderation; tolerance; intellectual humility.

Introduction

In various parts of the world, the threat of conflict triggered by differences in ethnicity, ethnicity, race, political affiliation and religious sentiments is still prone to occur, leading to the dominance of the majority over minorities (Rogers 2018; Syarif 2019; Yazdani 2020). Extreme religious attitudes and self-righteousness also cause this condition. Some countries have problems with inter-religious relations; for example, the feud between Muslims and Buddhists has occurred in Sri Lanka and Myanmar. Conflicts between Hindu and Muslim groups in India arose as a result of mutual contempt between religious communities (Frydenlund 2015; Singh 2018). This situation forces humanity into a situation of conflict and even war, which is exhausting. Several studies have found the role of faith-based organisations and religious leaders in promoting peaceful conflict resolution through mediation. Mediation can be done by increasing the meeting point between religious and cultural values. This process is called moderation, choosing a middle way between conflict resolution and peace and strengthening religious relations (Pajarianto 2022; Pajarianto, Pribadi & Sari 2022).

Demographically, Indonesia can potentially see conflict between one religion and the adherents of another because several religions live in this country. Islam is the majority religion, as Catholicism, Protestantism, Hinduism, Buddhism, Confucianism and other beliefs have lived for centuries in the archipelago, not to mention hundreds of tribes with different languages. Indonesia learns from conflicts that take advantage of religious sentiments, such as in Poso, Maluku, Kalimantan and other areas (Hasudungan 2021; Khairil 2017; Zulkifli et al. 2019). Nowadays, tolerance is encouraged by the government and civil society. A survey from Politica Research and Consulting (PRC), conducted by the Indonesian Political Parameter (PPI) in 2022, showed that there is an increase in the value of the situation of ethnic tolerance in Indonesia based on the assessment of these figures, which is 7.32, or in the excellent category. Likewise, the situation of religious tolerance has a value of 6.85. Then the security situation gets a score of 6.83, and the situation of the civil role scores 6.57, the situation of human rights enforcement scores 6.05 and the economic situation has a value of 6.01 (Purwati, Darisman & Faiz 2022).

Indonesia can be a model for managing potential religious and ethnic conflicts with tolerant religious understanding, attitudes and behaviour so that moderation becomes a unique feature and process (Zakaria 2020). Studies in Pakistan are currently struggling to transform religious moderation in educational curricula to support peace, because education can exacerbate or improve conflict (Kalhoro & Cromwell 2022). In addition, studies in Papua, Indonesia, show that moderation of religious understanding with local wisdom can reduce potential conflict (Rusyaid, Hermanto & Nasir 2022). As a result, religious moderation has become a national policy as a solution to prevent intolerance and radicalism (Subchi et al. 2022). Moderation is the essence of Islam, which is very relevant in the context of diversity in all aspects, religion, customs, ethnicity and the nation itself (Dawing 2017). Religious moderation has at least three dimensions: (1) national commitment, (2) nonviolence and (3) accommodation to local culture. These three indicators can be used to identify how strongly the religious moderation practised by millennials in Indonesia is and how much vulnerability they have (Fahri & Zainuri 2019).

Millennials are defined as those born between 1980 and 1995 (Foot & Stoffman 1996). David Foot is a demographer who based his opinion on them as the 'Baby Boom Echo'. Millennials are said to have a common location in historical time, shaped by historical events and experiences at that time (Gilleard 2004). This conceptualisation of 'generation' is rooted in Mannheim's theory or the sociology of generation, in which members of the same generation share more than the same year of birth. As a result, the environment in which millennials grew up during their formative years influences their values, attitudes and behaviour (Mannheim 1984).

Several researchers have explored the issue of religious moderation, but in general, it is still in the literature review and published in national journals. Firstly, it was conducted by Nuraliah Ali to measure religious moderation descriptively with limited indicators. More indicators can be formulated to determine a person's perspective, attitudes and religious methods (Ali 2020) or to consider other variables as mediation. Secondly, according to Dodego, religious moderation is needed by the Indonesian people because it is simple, it is not rigid and it promotes harmony (Dodego & Witro 2020). Thirdly, the study in Australia by Markus also describes the potential discrimination of millennial youth, but they make good use of opportunities and cultural diversity to understand differences (Markus 2017). Fourthly, Subchi found that religiosity influences religious moderation, which is different from other findings about the adverse effects of religiosity, especially the ritual dimension, on religious tolerance, internally and externally (Subchi et al. 2022). Fifthly, Wolhuter suggests developing a co-existence model of worldviews and life (Wolhuter, Potgieter & Van der Walt 2014). This model evaluates inclusivism, universalism and pluralism, which have shortcomings.

Religious moderation is an essential issue in Indonesia's National Medium-Term Development Plan. It is one of the

crucial agendas in countering various acts of intolerance that can occur in the largest multicultural country in the world, like Indonesia. From previous research (research gap) and the development of religious moderation discourse, researchers developed a novelty by including intellectual humility to be considered as a mediation of religious moderation with tolerance. Several recent studies have more specifically found the effect of intellectual humility on religious tolerance. Humility and tolerance are different but related concepts (Krumrei-Mancuso & Rouse 2016). Openness and flexibility in thinking also make it easier for individuals to see from the perspective of others; thus, intellectual humility is more easily formed and strengthens tolerance (Church & Samuelson 2016; Leary et al. 2017). This study aims to identify indicators of the religious moderation model to strengthen tolerance attitudes with intellectual humility mediation and to design a religious moderation model to strengthen tolerance attitudes with intellectual humility mediation.

Methods

In general, this research will carry out the process of identifying and designing the model (Thiagarajan, Semmel & Semmel 1974). This study is qualitative-quantitative descriptive research, taking an educational and religious approach by collecting various themes, cultural focuses, values and symbols in each domain (Spradley 2016). The research model is an unbalanced mixed combination model or concurrent embedded. The concurrent embedded method is a research method that combines qualitative and quantitative research methods by mixing both methods in an unbalanced but independent manner to answer similar problem formulations (Sugiyono 2017).

The data source in this study is the subject from which the data can be obtained (Arikunto 2013; Moleong 2007). Informants were identified using snowball sampling, and as many as 350 people were selected proportionally. In detail, there were 100 students from the western part of Indonesia, 150 students from the centre and 100 from the eastern part. Focus group discussions (FGD) and interviews were used to collect data. The FGD process is carried out in stages: (1) preparation by arranging seating, equipment, notes and group dynamics; (2) facilitation during the meeting, starting with random self-introduction, approval, confidentiality and rules; (3) the discussion process, by recording and observing the discussion, investigating, pondering and observing nonverbal cues; and (4) closing, thanking the FGD participants and resource persons.

Data analysis was carried out using qualitative software, in this case, NVivo 12 Plus, as a computer platform programme developed by QSR International to process data through highlighting, writing notes and linking ideas (Brandão 2015; Edwards-Jones 2014; Göransson et al. 2007; Humble & Radina 2019; Jackson 2021). The stages of data analysis consist of (1) collecting data, (2) organising data, (3) making memos, (4) coding data, (5) analysing data and (6) displaying data (Woolf & Silver 2018).

To perform the modelling consists of (1) drawing a path diagram according to the research model framework; (2) testing the outer model to assess the validity and reliability of indicators in measuring the variables (constructs); (3) assessing the goodness-of-fit model to ensure that the processed data fits the estimated model so that the sample used can provide an overview of the actual population conditions; and (4) testing the inner model, which is the stage of testing the influence between variables as a tool to test research hypotheses (Ringle 2015).

Findings and discussion

This study's findings identify young Muslims' views towards tolerance, which are taken from the religious perspective of the Indonesian people, who prioritise moderate attitudes. The researcher identifies the community's views, especially those of young Indonesians, towards tolerance. In the end, this view is taken as the principle and value of the Indonesian people in their attitude, especially towards the value of plurality.

Youth national commitment

National commitment is an attachment to full responsibility to be loyal and grow self-awareness as an Indonesian nation. Without a consistent national commitment from citizens, the state cannot stand upright and achieve the aspirations and hopes of its people. National commitment is related to the attitude of young people towards the symbols of the state and the basic consensus, that is, the agreement of the entire Indonesian nation. Youth's national commitment can be seen in Figure 1.

In Figure 1, the aspect of national commitment from students from the western, central, and eastern parts of Indonesia is relatively the same, but the differences are not too significant. However, there are some aspects to this finding. All young people do not agree with the caliphate (*khilafah*) state because it contradicts the state ideology, namely Pancasila. *Khilafah* is one of the most massive and crucial issues in Indonesia. One

of the mass organisations carrying the caliphate issue is Hizb ut-Tahrir, which claims that they are here to fight what they claim is a secular-capitalist-nationalist system and considers Muslims who believe in democracy to be *kufur*, infidels or even apostates, as well as those who have embraced democracy. ~~Deviate from the faith~~ (Valentine 2010). The government dissolved Hizbut Tahrir Indonesia (HTI) based on Government Regulation in Law Number (*Perppu*) 2 of 2017, namely Law Number 17 of 2013 concerning civil society organisations (CSO). Through this *Perppu*, the government has the authority to prohibit organisations that 'spread ideological or philosophical doctrines that violate Pancasila and the 1945 Constitution'. Previous findings corroborate that as many as 81.5% of millennial youth support and commit to the Unitary State of the Republic of Indonesia (IDN Research Institute 2019). Meanwhile, all youth informants (100%) also considered Pancasila to follow Islamic teachings, and all informants recognised Pancasila as the state ideology.

Antiviolence

Antiviolence is one of the pillars of religious moderation that young people must possess. Even now, nonviolent education is developing, which can also be called peaceful education, and is conducted wholeheartedly to educate, not teach. In Figure 2, young people's attitudes towards nonviolence are shown.

In Figure 2, young people from western, central and eastern Indonesia generally show an antiviolence attitude. They will not mediate conflict (4%) if it is on a scale that the local government can handle. If the conflict is widespread, 20% of youth informants from eastern Indonesia will become mediators in the event of a conflict. Two percent of informants are willing to commit acts of violence. They will do so if the religion they believe in is disturbed from the outside. All the informants indicated that they would not do any damage even though there are illegal places of worship and would leave it to the government ~~to complete the legality~~. While

attitudes towards violent behaviour are often associated with religion, they disagree. Religion does not teach violence against followers of other religions or houses of worship.

The data explain that young Indonesians have shown a positive attitude towards fighting violence in the name of religion. Violence deviates from behavioural norms, passion, intensity or attitude polarity (Kruglanski & Orehek 2012). In this case, violent extremism can be explained as firmness of belief, willingness to defend a position, firmness of opinion and using violent means. They tend to refuse and position themselves as mediators in every conflict.

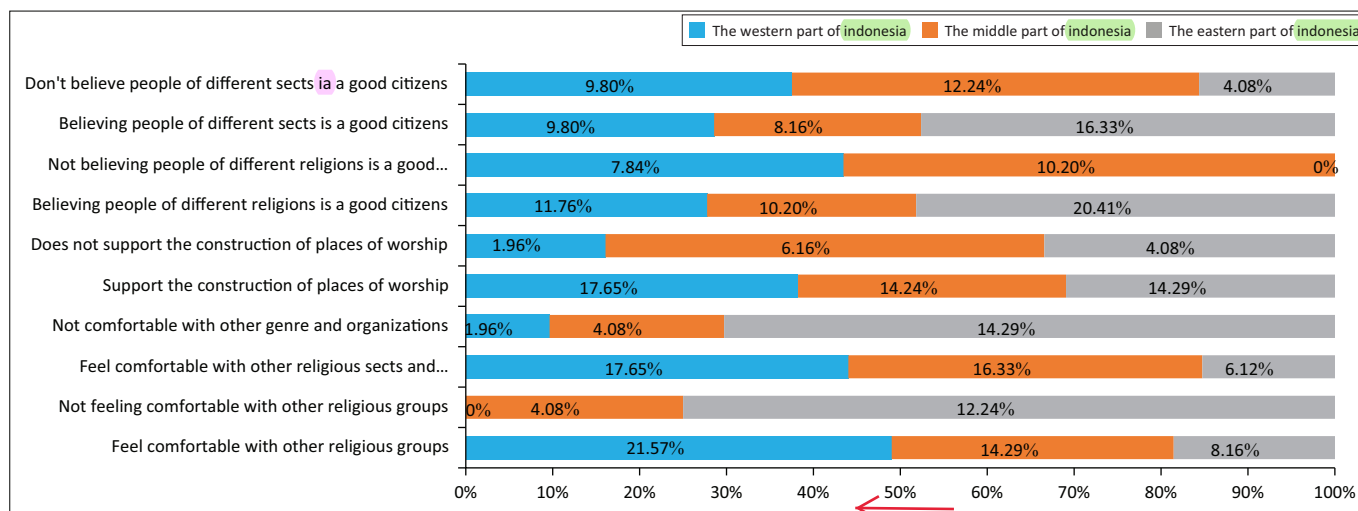

Youth attitudes towards local culture

Local cultural diversity is a social phenomenon that can shape each region's cultural character and image. Every

society has a local culture inherent in the community, including young people. Local culture arises when residents of an area already have the same mindset and social life, so it becomes a habit that distinguishes them from other residents.

In Figure 3, young people's answers to the culture generally show the same character. There are indicators of a strengthened attitude of respect for local culture, which is the fundamental value of their lives. Young people from eastern Indonesia showed a more positive attitude towards houses of worship with cultural themes (20%). Furthermore, regarding tolerance of various cultures that grow in their environment, young people from eastern Indonesia also show a higher attitude, as much as 24.44%. This is because, in eastern Indonesia, various local cultures are still relatively well preserved and live in a pluralistic socioreligious situation. Likewise, for respect for culture, young people from eastern Indonesia, with 22.22%.

[AQ7]

FIGURE 4: Youth tolerance.

[AQ3]
[AQ8]

Local culture, in several studies, can be used as a glue for differences between religions and become unique in Indonesia (Pajarianto et al. 2022). Moderate people tend to be more accepting of local traditions and culture in their religious behaviour, as long as they do not conflict with the central teachings of religion. Indonesian society is rich in local culture that adapts and manages resources for mutual prosperity (Pesurnay 2018), often associated with myths even though it grows dynamically following human innovation and creativity (Effendi 2019). It is essential to revitalise local culture by strengthening tolerance for various Indonesian treasures.

Youth tolerance

Young people today live in a very fast paced world, especially with the development of technology and digital information. Apart from having negative potential, this development has a positive impact on their perspective on humans or different groups.

The informants' answers on the tolerant attitudes of young people show that there are different perceptions and answers about tolerance. Informants from western Indonesia indicated that they believe that people from different sects or schools can become good citizens (9.80%), while others are not sure about the value (9.80%). Some do not believe people of different religions to be good citizens (7.84%); a larger number do believe people of different religions to be good citizens (11.76%). Some do not support the construction of places of worship (1.96%), but others support the construction of places of worship (17.65%). Other schools and organisations make some informants uncomfortable (1.96%); other informants reported that schools and organisations make them comfortable (17.65%). No participants reported that they do not feel comfortable with other groups (0%), and many feel comfortable with other religious groups (21.57%).

[AQ9]

Central Indonesian informants indicate that they do not believe that people from different sects or schools can

[AQ10]

become good citizens (12.24%) and believe in values (18.16%). They do not believe people of different religions to be good citizens (10.20%). Some do not support the construction of places of worship (6.12%) but others support the construction of places of worship (14.24%). Some are not comfortable with other schools and organisations (4.08%), but many feel comfortable with other schools and organisations (16.33%). Some do not feel comfortable with other groups (4%), while others feel comfortable with other religious groups (14.29%).

[AQ9]

Eastern Indonesia informants indicate that they do not believe that people from different sects or schools can become good citizens (4.08%) and believe in values (16.33%). None responded that they do not believe people of different religions to be good citizens (0%); they believe people of different religions to be good citizens (20.41%). Some do not support the construction of places of worship (4.08%), but others support the construction of places of worship (14.29%). Some do not feel comfortable with other schools and organisations (14.29%) or with other schools and organisations (16.33%). Some do not feel comfortable with other groups (12.24%), while a smaller number feel comfortable with other religious groups (8.16%).

[AQ9]

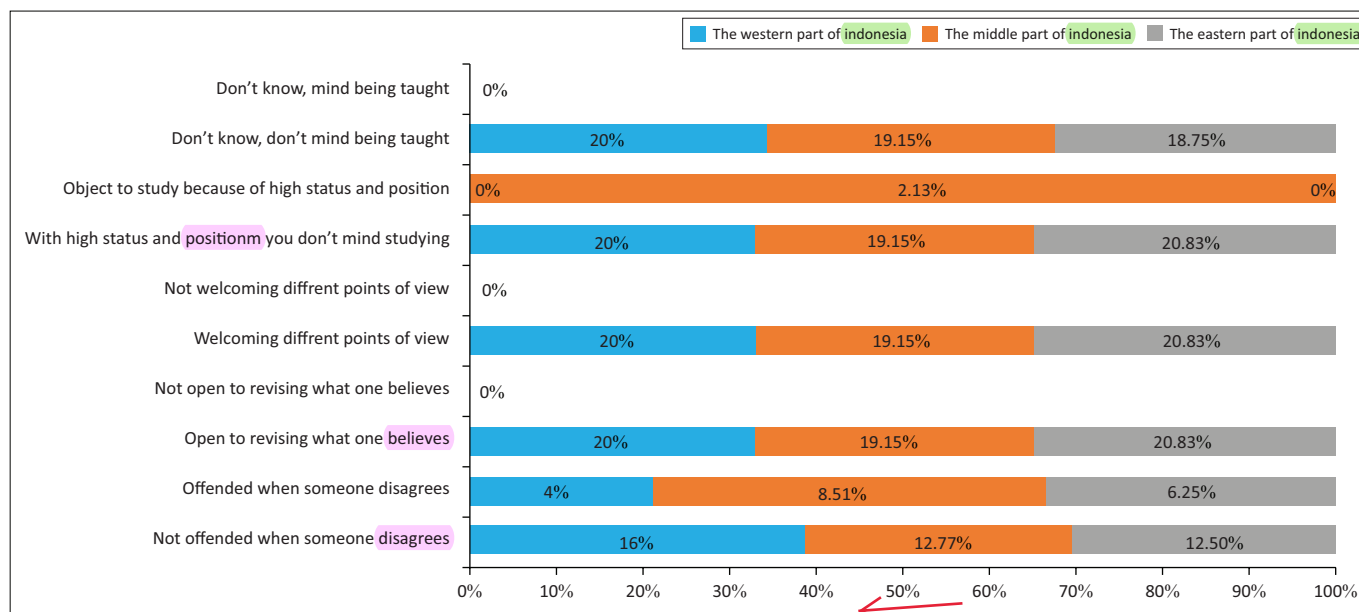

[AQ11]

The attitude of not believing people of different religions are good citizens because certain sects or groups are not in line with the Indonesian government system is thus judging that the views of these groups are limited and only seeing them from one religious perspective, whereas religions worldwide have the resources to respect religious freedom (Kärkkäinen 2017) and have universal views whose values can be accepted by all religious adherents.

[AQ9]

The attitude of young people's intellectual humility

Intellectual humility (intellectually) is often considered one factor in how someone learns something new, because

[AQ3]

Source:

FIGURE 5: The attitude of intellectual humility.

humility involves acknowledging one's limitations, including ignorance of something. Young people must have this attitude, as social skills are needed in the field of work or to stem the flow of radicalism that can arise from an attitude of self-righteousness and claiming that others are wrong. Thus, this attitude is very relevant as a mainstream viewpoint among young people.

In Figure 5, Muslim youth informants have several variants of attitudes towards different views. Western Indonesian informants are motivated to learn if they do not understand (20%), do not mind being taught (20%), welcome new views (20%) and are open to revising their views (20%); some are offended when someone disagrees (4%), and others are not offended by people who disagree (16%). In this aspect, all informants do not mind being given information, taught and learning from others, as well as welcoming new views even though they are different. It can also be seen in the readiness of all informants to revise their views if they are wrong, which indicates that young people's intellectual humility is high and stable. These views are not much different from those of the informants in the central and eastern parts.

These results are relevant to several findings on humility and religiosity regarding religious tolerance (Hook et al. 2017; Krumrei-Mancuso 2018; Leary et al. 2017; Rodriguez et al. 2017; Zhang et al. 2018). From these results, it can be concluded that there is a successful application of the concept of religious moderation (Muhtifah et al. 2021). Thus, intellectual humility is easier to form and strengthens tolerance (Church & Samuelson 2016; Leary et al. 2017). It is what can be offered because, from the research results, the potential for young people to be exposed to radicalism is also quite high (Nafi'a et al. 2022). Nowadays, intellectual humility in religion is difficult to find, so what happens is that one feels self-righteous, which makes it easy to disbelieve

in others and makes it challenging to dialogue with other religions. In the end, it is social learning.

Developing a model of religious moderation for young people

Modelling by considering the stages in the partial least squares structural equation modelling (PLS-SEM) analysis (Ringle 2015). The first step is confirmatory factor analysis (CFA) with the Smart PLS programme, consisting of several stages: convergent validity, discriminant validity and composite reliability. The results of the partial least squares (PLS) analysis can be used to test the research hypothesis if all indicators in the PLS model have met the requirements of convergent validity, discriminant validity and composite reliability. The estimation results of the PLS model with algorithmic techniques can be seen in Figure 6.

[AQ5]

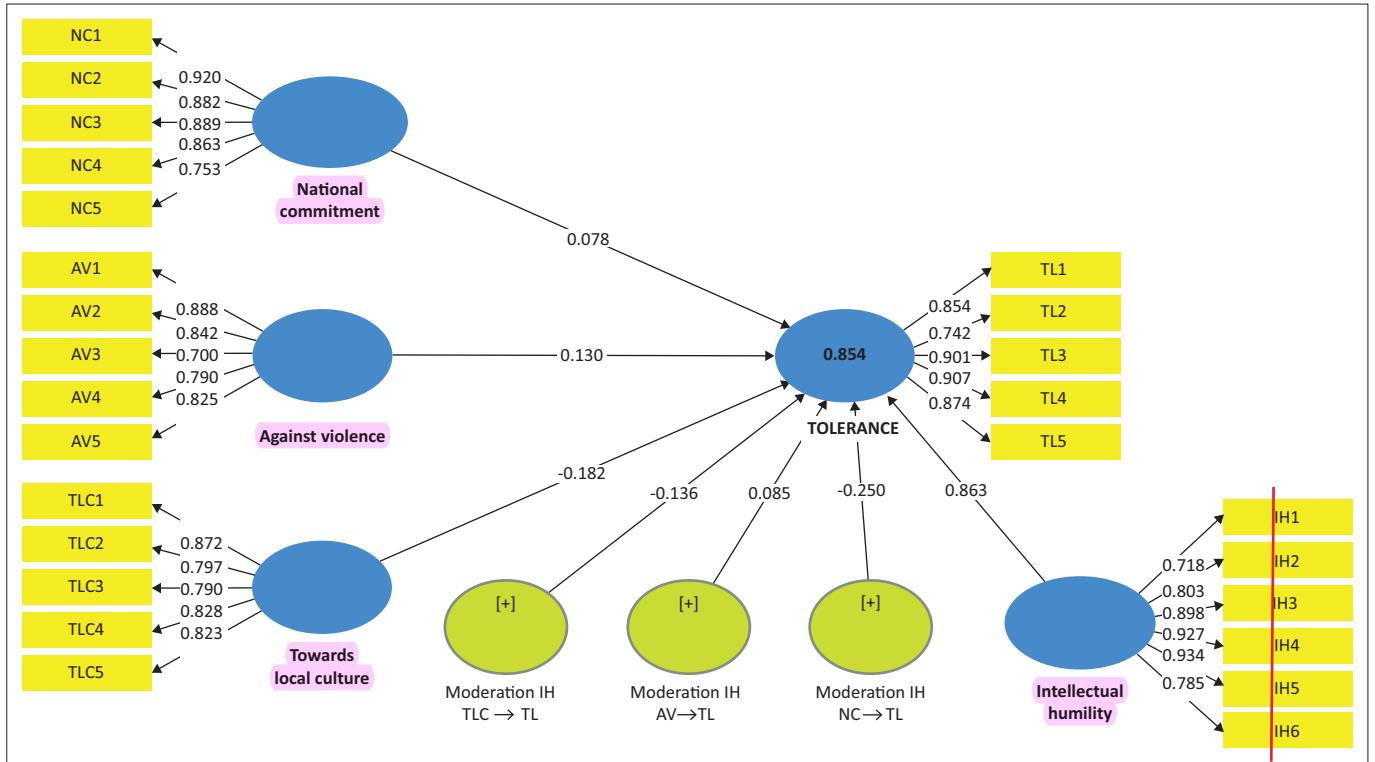

[AQ12]

[AQ5]

In the second step, the researcher conducted a convergent validity test by looking at the loading factor value of each indicator on the construct. Because this is confirmatory, the limit for the loading factor used is 0.7. The loading factor value can be seen in Table 1.

Based on the analysis in Table 1, the results show that all indicators have a loading factor value > 0.7, which means that all indicators can be used to measure the construct; no indicators must be excluded because all indicators have met the validity criteria required. In addition to looking at the loading factor value of each indicator, convergent validity must also be assessed from the average variance extracted (AVE) value of each construct; all constructs in the PLS model are declared to have met convergent validity if the AVE value of each construct is > 0.5. The complete AVE value of each construct can be seen in Table 2.

AVE value exceeding 0.5, which means that all construct indicators have met the required convergent validity criteria. The analysis stage was continued at the discriminant validity test stage.

The third step, discriminant validity, was carried out to ensure that each concept of each latent variable is different from the other variables. The model has good discriminant validity if the AVE square value of each exogenous construct exceeds the correlation between the construct and other constructs. The results of the discriminant validity test were obtained as follows.

Based on the results of the discriminant validity test in the Table 3, it was found that the square root value of the AVE of all constructs consistently exceeded the correlation coefficient of the construct with other constructs. So it can be concluded that all constructs in this PLS model have met the required discriminant validity.

0.718 for the AK, 0.849 for the IH and 0.668 for the KK, so that it can be stated that the discriminant validity of the TL5 was fulfilled.

The fourth step was to carry out construct reliability, which can be assessed from Cronbach's alpha value and the composite reliability value of each construct. The recommended value of composite reliability and Cronbach's alpha is more than 0.7. However, in development research, because the limit of the loading factor used is low (0.5), the value of composite reliability and low Cronbach's alpha are still acceptable as long as the requirements for convergent validity and validity are met. Discriminant validity has been met.

Based on the analysis results in Table 5, the composite reliability value of all constructs also exceeded 0.7. This indicates that all constructs have met the required reliability, so it can be concluded that all constructs were reliable, while based on Cronbach's alpha value, the performance was still below 0.7. It can be ignored. The performance construct can still be considered reliable because the reliability measurement using the composite reliability value is considered better than the reliability measurement using Cronbach's alpha. With steps taken systematically, the preparation of the model has met the requirements so that it can be continued with model testing.

Relying on this research model, preparing religious moderation education for young people is essential by combining various approaches, including strengthening intellectual humility, which will impact tolerance. The alternative is an integrative youth religious moderation intervention, namely by combining psychological and

In addition to using the Fornell–Larcker method, discriminant validity can be seen from the cross-loading value of each indicator to the construct. The indicator is declared to meet the discriminant validity criteria if the cross-loading indicator to the construct is higher than the cross-loading indicator value to other constructs.

The results of the two discriminant validity tests showed that the outer PLS model has met the required discriminant validity criteria. Based on the results of the discriminant validity test in Table 4, it can be seen that all indicators had the highest indicators in their constructs, not in other constructs, so it can be stated that all indicators have met the requirements of discriminant validity. For example, the TL5 indicator had a cross-loading of 0.874 to the construct (TL), while for the other constructs, the cross-loading of TL5 was lower than 0.874, which was 0.785 for the ABL construct,

counter-ideological support programmes, increasing critical, open and reflective thinking skills (Milla, Putra & Umam 2019; Milla & Umam 2019), open-mindedness as one of the intellectual humility abilities (Kruglanski et al. 2018), psychological support through identity strengthening and counselling (Bouzar & Martin 2016) and an emphasis on cognitive complexity. In other research, young Indonesians agree with tolerance as much as 93%; they view intolerance as a terrible value (Pandey 2020). In future research, these aspects will be considered to test the model of religious moderation in youth.

Conclusion

This study concludes that intellectual humility is needed to mediate religious moderation, which consists of national commitment, antiviolence and accommodation of local culture towards youth tolerance. The data coding shows that intellectual humility attitudes mediate antiviolence attitudes towards groups and communities. Antiviolence attitudes towards groups encourage accommodative attitudes towards the local culture and impact tolerance in the aspect of national commitment that strengthens tolerance with mediation from intellectual humility. With this finding, the religious moderation programme must consider the integration of all disciplines in developing a model of religious moderation that is relevant to the needs of dynamic youth. The preparation of the model of religious moderation in this research has fulfilled all the requirements, so it can be continued for testing.

~~Theoretically and practically, this research contributes to the development of a model of religious moderation which is currently only dominated by the approach of faith and belief in the teachings of the scriptures. The religious attitudes of young people must be moderated with various instruments according to their unique and unique needs amid the rapid development of digitalisation.~~
